The MVS Connection

Wohlhaupter® GmbH developed the world's first modular tooling system called MultiBore® in 1973. The modular tooling system was designed to be compatible with all machine spindles, and its connection features a triple point clamp (Figure 1). The triple point clamp (1, 2, & 3) maximizes rigidity and creates an accuracy less than 3µm when the tool is changed.

- Ensures high axial clamping forces on mating surfaces
- Provides maximum rigidity
- Threaded taper pins for precise cutter positioning

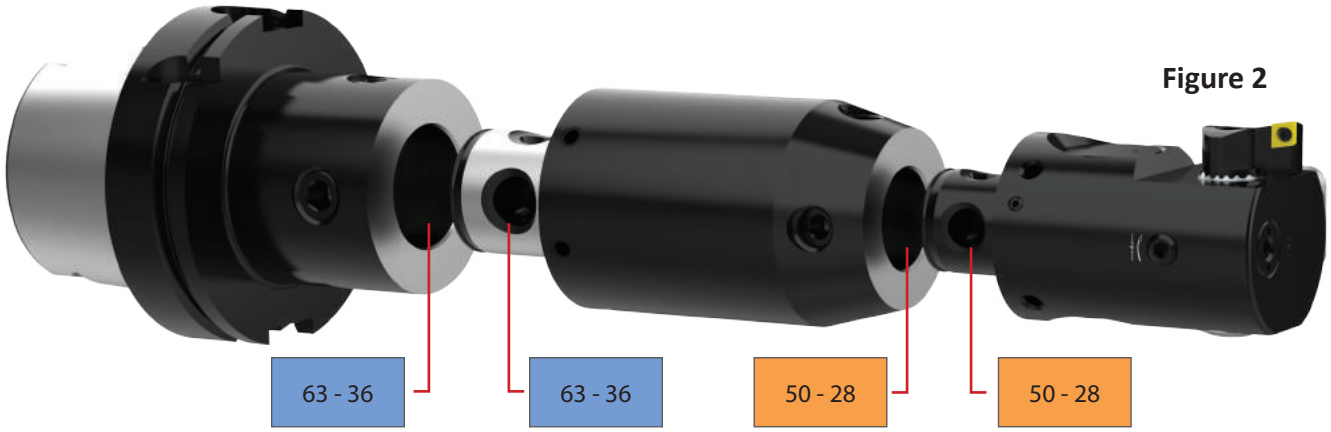

Figure 1

MVS Connection Color Guide

Wohlhaupter® created a unique color-coding system to find the right connections for different tool components quickly and easily. Each Wohlhaupter / MVS connection size has its own color-coding. Simply match the colors to select the correct combination of tool components (Figure 2). We've also incorporated the color-coding system into our packaging to reduce setup time even more.

Figure 2

M 8	19.5 - 22	22 - 11	25 - 14	32 - 18	40 - 22	50 - 28	63 - 36	80 - 36	100 - 56	D 40	D 60

MVS Connection Example - Selecting the Correct Intermediate Module

Example Machining Parameters

Hole Diameter: 75.00mm (2.942")
Hole Depth: 200.00mm (7.874")
Machine Spindle: HSK-A 100 DIN 69893

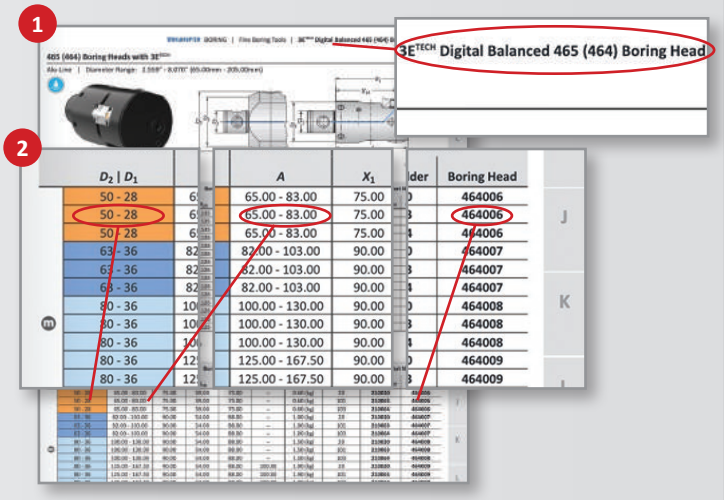

1 Select your boring tool

- Example: 464 Balanced Boring Head

2 Select the tool that meets the required boring range

- MVS connection: 50 - 28
- *A* = 65.00mm - 83.00mm (2.559" - 3.268")
- Part No. : **464006**

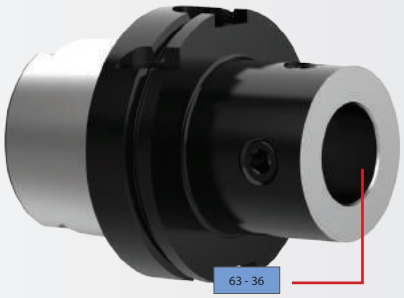

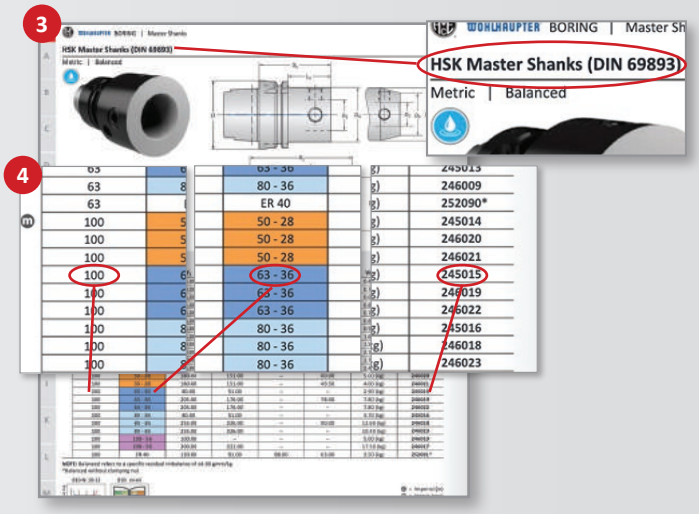

3 Select the master shank that fits your spindle

- Machine spindle: DIN 69893 HSK

4 Choose the connection that fits your application

- MVS connection: 63 - 36
- Part No. : **245015**

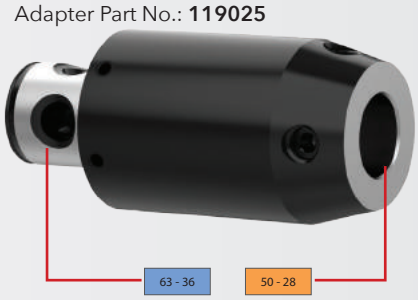

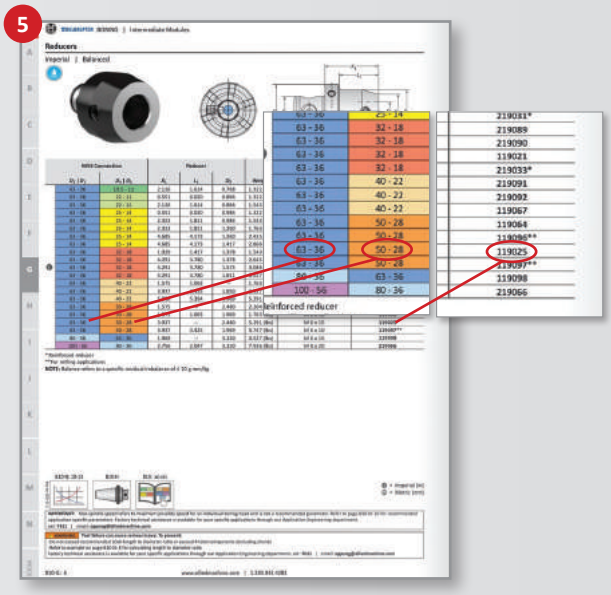

5 Select the correct intermediate module

Must meet the hole depth requirements and MVS connections for both the boring head and shank

Hole depth: 200.00mm (7.874")
Boring tool 464006 length (X_1): 75.00mm (2.953")
Master shank 245015 length (L_1): 51.00mm (2.008")
Minimum required length of adapter: 74.00mm (2.913")
Boring tool 464006 MVS connection: 50 - 28
Master shank 245015 MVS connection: 63 - 36
Adapter Part No.: **119025**

WOHLHAUPTER®

Precision boring at its finest.

From high precision to high production, Wohlhaupter has the right solution for your hole finishing applications. With the most reliable digital readout displays, the Wohlhaupter versatile boring product line offers the most precise and flexible modular system on the market.

Your safety and the safety of others is very important. This catalogue contains important safety messages. Always read and follow all safety precautions.

This triangle is a safety hazard symbol. It alerts you to potential safety hazards that can cause tool failure and serious injury.

When you see this symbol in the catalogue, look for a related safety message that may be near this triangle or referred to in the nearby text.

There are safety signal words also used in the catalogue. Safety messages follow these words.

⚠ WARNING

WARNING (shown above) means that failure to follow the precautions in this message could result in tool failure and serious injury.

NOTICE means that failure to follow the precautions in this message could result in damage to the tool or machine but not result in personal injury.

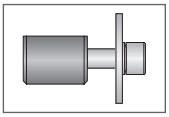

NOTE and **IMPORTANT** are also used. These are important that you read and follow but are not safety-related.

Visit www.alliedmachine.com for the most up-to-date information and procedures.

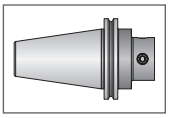

Applicable Industries

Aerospace | Agriculture | Automotive | Firearms | General Machining | Oil & Gas | Renewable Energy

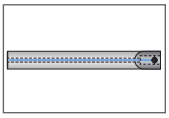

Reference Icons
The following icons will appear throughout the catalogue to help you navigate between products.

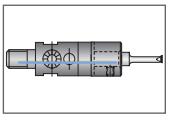

Clamping Elements
For use with insert holders and boring heads

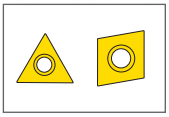

Shanks
A variety of shanks for different machines

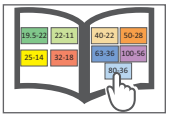

248 Shanks
A variety of shanks for different machines

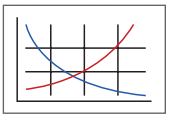

248 Boring Head
248 boring head that connects into the adapter shanks

Inserts
For use with insert holder boring heads and boring bars using indexable inserts

MVS Connection Colour Guide
Detailed instructions and information regarding the MVS connection(s)

Recommended Cutting Data
Speed and feed recommendations for optimum and safe boring

Through Coolant Option
Indicates that the product is through coolant

VarioBore Product Overview

VarioBore with 3E^{TECH+}
VERSATILE FINE BORING

Need more versatility?

The Wohlhaupter® VarioBore head offers precision and versatility, and the 3E^{TECH+} docking port provides convenient and simple diameter adjustments.

Experience ***precision boring*** for yourself.

- Diameter range: 0.40 mm - 152.00 mm
- Offers outside turning capabilities: 2.00 mm - 66.00 mm
- Ease the stress of working on different day-to-day projects with boring kits
- 3E^{TECH+} module provides a simple digital readout
- Max spindle speed: 27,500 RPM

NOTE: 3E^{TECH+} adjustment accuracy of 0.001 mm on diameter

NOTE: Vernier adjustment accuracy of 0.002 mm on diameter

IMPORTANT: Max spindle speed refers to maximum possible speed for an individual boring head and is not a recommended parameter. Refer to page B10-M: 12 for recommended application-specific parameters. Factory technical assistance is available for your specific applications through our Application Engineering department.

248 Product Overview

248
VERSATILE FINE BORING

Compact design. Precision boring.

The Wohlhaupter® 248 compact boring head allows for higher spindle speeds and achieves long-reach boring jobs. Its cylindrical shank provides variable length adjustments up to 10xD.

Test this ***compact design*** for finish machining today.

- Diameter range: 3.00 mm - 30.20 mm
- Length adjustment up to 10xD
- Through coolant boring tool
- 0.01 mm adjust on diameter
- Max spindle speed: 20,000 RPM

IMPORTANT: Max spindle speed refers to maximum possible speed for an individual boring head and is not a recommended parameter. Refer to page B10-M: 12 for recommended application-specific parameters. Factory technical assistance is available for your specific applications through our Application Engineering department.

PrimeBore Product Overview

PrimeBore
VERSATILE FINE BORING

Advancing versatile technology.

With over 30 years of development, the Wohlhaupter® PrimeBore boring head offers versatility and precision. The PrimeBore head can bore multiple hole sizes ranging from 3.00 mm - 208.00 mm with our broad range of compatible boring bars.

Complete your boring job with ***technology that continues to advance***.

- Diameter range: 3.00 mm - 208.00 mm
- Ease the stress of working on different day-to-day projects with boring kits
- 0.002 mm adjust on diameter
- Economical precision and versatility
- Max spindle speed: 12,000 RPM
- Through coolant

IMPORTANT: Max spindle speed refers to maximum possible speed for an individual boring head and is not a recommended parameter. Refer to page B10-M: 12 for recommended application-specific parameters. Factory technical assistance is available for your specific applications through our Application Engineering department.

Digital 510 Product Overview

Digital *510*
VERSATILE FINE BORING

Improve your boring job with the Digital 510 boring head.

The Wohlhaupter® Digital 510 boring head offers precision, quality, and efficiency. Our integrated digital display makes the 510 the smallest precision boring tool available and allows for easy optoelectronic adjusting.

Experience ***precision boring*** for yourself.

- Diameter range: 0.40 mm - 12.00 mm
- Easy-to-read digital display
- Through coolant
- External counterweight for balancing
- Protected against coolant and dust according to IP65
- Fine adjustments of 0.002 mm
- Ideal for CAT40, BT30, HSK40
- Max spindle speed: 35,000 RPM

NOTE: Adjustment accuracy of 0.002 mm on diameter

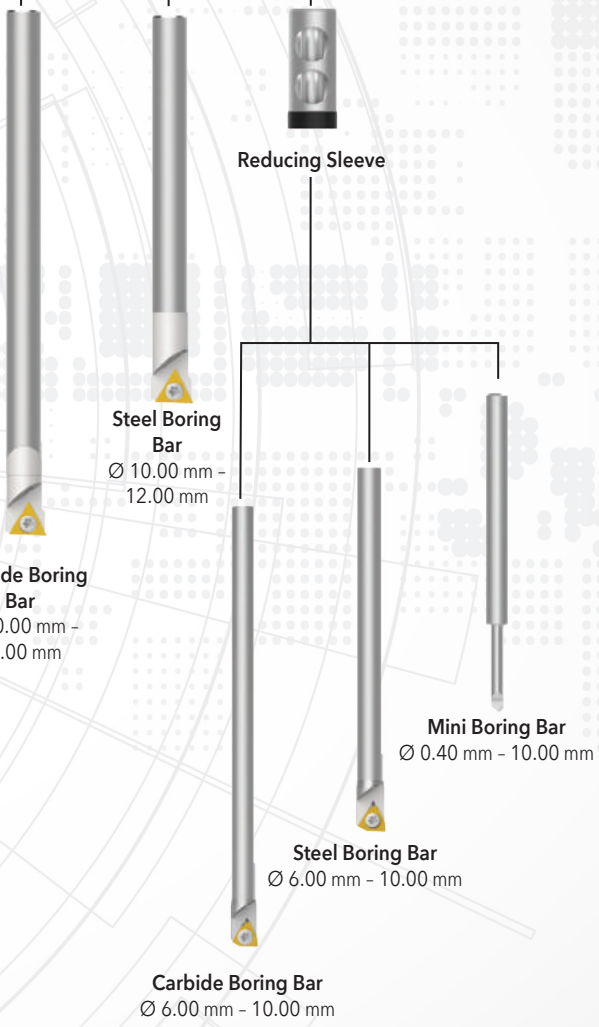

IMPORTANT: Max spindle speed refers to maximum possible speed for an individual boring head and is not a recommended parameter. Refer to page B10-M: 12 for recommended application-specific parameters. Factory technical assistance is available for your specific applications through our Application Engineering department.

DigiBore Product Overview

DigiBore
VERSATILE FINE BORING

Advanced versatile technology.

The Wohlhaupter® DigiBore boring head provides internal balancing, which makes this tool the stress-free choice to meet your required surface finish. Its digital display allows for quick and accurate diameter corrections at the machine.

Engineered with the ***future in mind***.

- Diameter range: 3.00 mm - 208.00 mm
- Offers outside turning capabilities: 4.00 mm - 114.00 mm
- Digital readout for simple 0.002 mm diameter adjustments
- Ease the stress of working on different day-to-day projects with boring kits
- Automatic internal balancing improves surface finish, tool life, and accuracy
- Max spindle speed: 16,000 RPM
- Max coolant pressure: 40 bar

NOTE: Adjustment accuracy of 0.002 mm on diameter

IMPORTANT: Max spindle speed refers to maximum possible speed for an individual boring head and is not a recommended parameter. Refer to page B10-M: 12 for recommended application-specific parameters. Factory technical assistance is available for your specific applications through our Application Engineering department.

Fine Boring

Wohlhaupter® Fine Boring

410 | 464 | 364 | 564 | 310 | 537

Diameter Range: 20.00 mm - 205.00 mm

NOTE: Metric items pictured

NOTE: 3E^{TECH+} adjustment accuracy of 0.001 mm on diameter

NOTE: Digital and vernier adjustment accuracy of 0.002 mm on diameter

Boring has never been more exciting.

Wohlhaupter's fine boring systems are offered in both vernier and easy-to-read digital readout boring heads and cassettes. The lightweight Alu-Line serrated tool bodies reduce weight on the machine spindle.

Unbalanced & Balanced Digital 3E^{TECH+} Boring Heads

- 410 / 464 fine boring heads
- 410 Ø 20.00 mm - 29.00 mm
- 464 Ø 29.00 mm - 205.00 mm

Balanced Analogue Boring Heads

- 364 / 464 fine boring heads
- 364 Ø 20.00 mm - 29.50 mm
- 464 Ø 29.00 mm - 205.00 mm

Balanced Digital Boring Heads

- 564 fine boring heads
- Ø 50.00 mm - 205.00 mm

Unbalanced Analogue Boring Heads

- 310 fine boring heads
- Ø 20.00 mm - 205.00 mm

Analogue and Digital Cassettes

- 537 fine boring cassettes
- Ø 100.00 mm - 205.00 mm

Your safety and the safety of others is very important. This catalogue contains important safety messages. Always read and follow all safety precautions.

This triangle is a safety hazard symbol. It alerts you to potential safety hazards that can cause tool failure and serious injury.

When you see this symbol in the catalogue, look for a related safety message that may be near this triangle or referred to in the nearby text.

There are safety signal words also used in the catalogue. Safety messages follow these words.

⚠ WARNING

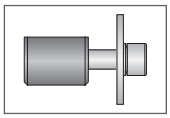

WARNING (shown above) means that failure to follow the precautions in this message could result in tool failure and serious injury.

NOTICE means that failure to follow the precautions in this message could result in damage to the tool or machine but not result in personal injury.

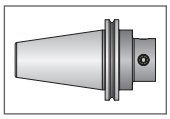

NOTE and **IMPORTANT** are also used. These are important that you read and follow but are not safety-related.

Visit www.alliedmachine.com for the most up-to-date information and procedures.

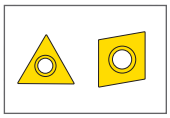

Reference Icons
The following icons will appear throughout the catalogue to help you navigate between products.

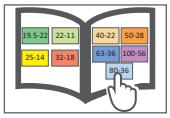

Clamping Elements
For use with insert holders and boring heads

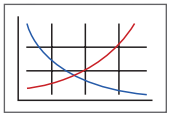

Shanks
A variety of shanks for different machines

Inserts
For use with insert holder boring heads and boring bars using indexable inserts

MVS Connection Colour Guide
Detailed instructions and information regarding the MVS connection(s)

Recommended Cutting Data
Speed and feed recommendations for optimum and safe boring

410 and 464 Product Overview

Digital 3E^{TECH+} 410 and 464 **FINE BORING**

Make easy diameter adjustments with our 3E^{TECH+} digital readout module.

Wohlhaupter® 410 and 464 digital boring heads are equipped with a 3E^{TECH+} docking port for easy digital adjustments. Boring heads from 29.00 mm offer precision boring with automatic balancing. Our boring heads are specifically engineered to minimise the residual imbalance produced by insert holder displacement. Wohlhaupter Alu-Line boring heads, ranging from 65.00 mm, offer a lightweight aluminium design with a wear-resistant coating that reduces weight on the spindle up to 50%. The insert holder can also be rotated for reverse machining jobs.

- Unbalanced 410 diameter range: 20.00 mm - 29.00 mm
- Balanced 464 diameter range: 29.00 mm - 205.00 mm
- Balanced 464 Alu-Line diameter range: 65.00 mm - 205.00 mm
  - Special coating on Alu-Line for wear-resistant surface
  - Alu-Line body reduces tool weight by 50%, reducing stress on the spindle
- Through coolant
- 3E^{TECH+} and vernier diameter adjustment of 0.002 mm
- Internal balancing improves tool life and surface finish
- Insert holder can be rotated for back boring jobs
- Max cutting speed: 1,700 M/min

Highly accurate adjustments through *vernier* scale

NOTE: 3E^{TECH+} adjustment accuracy of 0.001 mm on diameter

NOTE: Vernier adjustment accuracy of 0.002 mm on diameter

Versatile *3E^{TECH+}* digital readout compatible with other boring tools

IMPORTANT: Max spindle speed refers to maximum possible speed for an individual boring head and is not a recommended parameter. Refer to page B10-M: 12 for recommended application-specific parameters. Factory technical assistance is available for your specific applications through our Application Engineering department.

WOHLHAUPTER® 410 and 464 3E^{TECH+} DIGITAL
BORING HEADS

Wohlhaupter 3E^{TECH+}

Improve productivity and quality with the Wohlhaupter 3E^{TECH+} external digital readout module. The 3E^{TECH+} docks onto boring heads and cassettes that offer the 3E^{TECH+} port to make easy diameter adjustments at the machine.

- Make quick and easy micron-accurate diameter adjustments
- Easy-to-read digital display shows exact diameter adjustments
- Designed to be removed from boring tool before operation (if forgotten 3E^{TECH+} will fall off at 500 RPM)
- Adjustments of 0.002 mm on diameter
- Water and dust resistent IP 56
- Coolant and chip resistant
- 3E^{TECH+} will automatically turn off after 30 seconds of not using
- WEEE-Reg.-Nr. DE 15820388

✓ **High-production fine boring**

✓ **Easy diameter adjustment with 3E^{TECH+}**

✓ **Self-balancing 464 boring heads**

Balanced Analogue 364 and 464
FINE BORING

Analogue fine boring tools for high-production jobs

Wohlhaupter® 364 and 464 Analogue balanced boring heads offer precision boring with automatic balancing. Our boring heads are specifically engineered to minimise the residual imbalance produced by insert holder displacement. Wohlhaupter Alu-Line boring heads offer a lightweight aluminium design with a wear-resistant coating that reduces weight on the spindle up to 50% yet remains durable in challenging boring applications. The insert holder can also be rotated for reverse machining jobs.

- 364 diameter range: 20.00 mm - 29.50 mm
- 464 diameter range: 29.00 mm - 205.00 mm
- 464 Alu-Line diameter range: 65.00 mm - 205.00 mm
  - Special coating on Alu-Line for wear-resistant surface
  - Alu-Line body reduces tool weight by 50%, reducing stress on the spindle
- Internal balancing improves tool life and surface finish
- Through coolant
- Vernier diameter adjustment of 0.002 mm
- Insert holder can be rotated for back boring jobs
- Max cutting speed: 1,000 M/min

IMPORTANT: Max spindle speed refers to maximum possible speed for an individual boring head and is not a recommended parameter. Refer to page B10-M: 12 for recommended application-specific parameters. Factory technical assistance is available for your specific applications through our Application Engineering department.

Balanced Digital 564 Product Overview

Balanced Digital *564*
FINE BORING

Adjustable diameter for precise machining.

Wohlhaupter® Balance Digital 564 boring heads feature automatic balancing with an easy-to-read digital display. For diameter ranges above 65.00 mm, 564 boring heads are made of lightweight aluminium. 564 boring heads are specifically engineered to minimise the residual imbalance produced by insert holder displacement. Reverse boring applications can be achieved by rotating the insert holders.

Test the ***engineered lightweight*** boring head today.

- Diameter range: 50.00 mm - 205.00 mm
- Alu-Line diameter range: 65.00 mm - 205.00 mm
  - Special coating on Alu-Line for wear-resistant surface
  - Alu-Line body reduces tool weight by 50%, reducing stress on the spindle
- Digital readout advantage for diameter adjustments of 0.002 mm
- Through coolant
- Internal balancing improves tool life and surface finish
- Insert holder can be rotated for back boring jobs
- Max cutting speed: 2,000 M/min
- Max coolant pressure: 40 bar

Aluminium Boring Head
65.00 mm - 205.00 mm

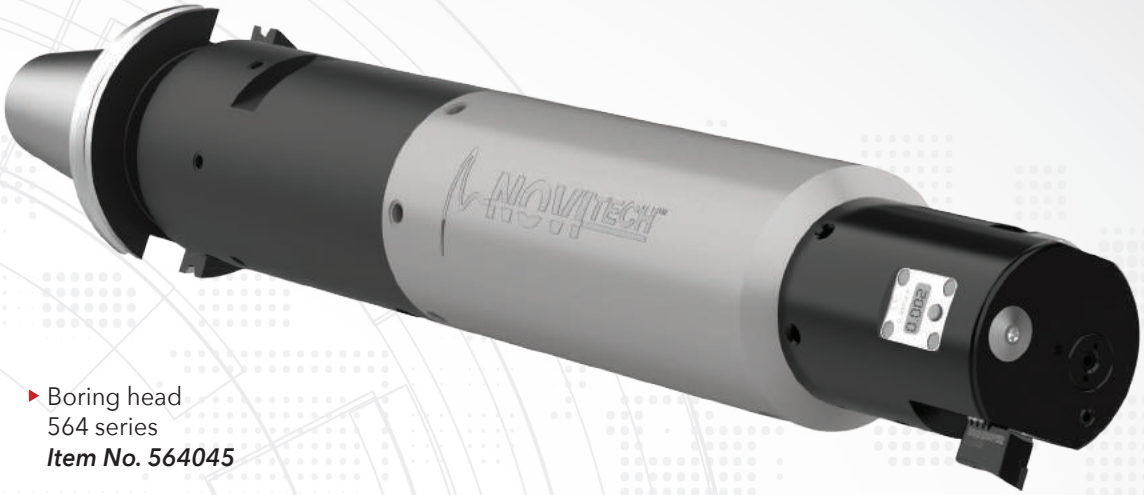

Steel Boring Head
50.00 mm - 65.50 mm

NOTE: Metric items pictured

NOTE: Digital adjustment accuracy of 0.002 mm on diameter

IMPORTANT: Max spindle speed refers to maximum possible speed for an individual boring head and is not a recommended parameter. Refer to page B10-M: 12 for recommended application-specific parameters. Factory technical assistance is available for your specific applications through our Application Engineering department.

WOHLHAUPTER® 564 BORING HEAD
with NOVI^{TECH}®

- Boring head
  564 series
  Item No. 564045
- NOVI^{TECH} vibration dampening intermediate module
  Item No. 519005

NOTE: Metric items pictured

NOTE: Digital adjustment accuracy of 0.002 mm on diameter

The Wohlhaupter 564 boring head with the NOVI^{TECH} vibration dampening module provided:

- ✓ **Excellent surface finish**
- ✓ **Eliminated vibration and chatter**

Product:	Wohlhaupter 564 Boring Head with NOVI^{TECH}
Objectives:	0.05 mm concentricity over the length of two bores spaced 355.6 mm apart
Material:	Cast iron
Hole Ø:	79.375 mm
Depth:	7xD

Measure	564 Boring Head with NOVI^{TECH}
RPM	430 RPM
Speed	107.28 M/min
Feed Rate	0.08 mm/rev
Penetration Rate	33 mm/min
Cycle Time (per hole)	3 min 32 sec
Hole Finish	3.8 Ra

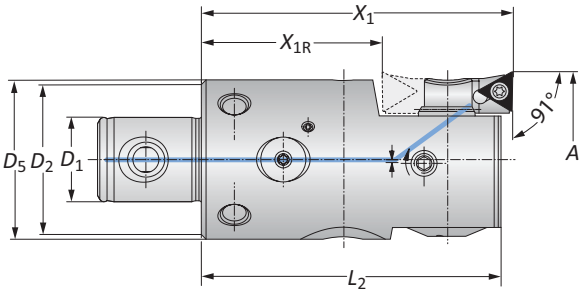

Boring Heads

Diameter Range: 50.00 mm - 65.50 mm

310
FINE BORING

Engineered with wear and tear in mind.

310 Wohlhaupter boring heads are made from steel for Ø 20.00 mm - 103.00 mm and coated Alu-Line material for Ø 100.00 mm - 205.00 mm boring heads to protect against corrosion and wear. The insert holder can be rotated quickly for reverse machining.

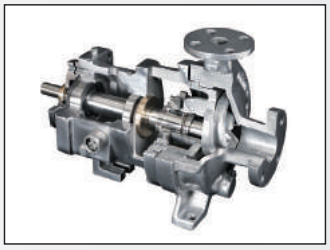

- Diameter range: 20.00 mm - 205.00 mm
- Alu-Line diameter range: 100.00 mm - 205.00 mm
  - Special coating on Alu-Line provides hard, durable surface
  - Alu-Line body reduces tool weight by 50%, reducing stress on the spindle
- Through coolant
- Vernier diameter adjustment of 0.002 mm
- Max cutting speed: 1,000 M/min

IMPORTANT: Max spindle speed refers to maximum possible speed for an individual boring head and is not a recommended parameter. Refer to page B10-M: 12 for recommended application-specific parameters. Factory technical assistance is available for your specific applications through our Application Engineering department.

WOHLHAUPTER® 310 BORING HEAD
*with NOVI*TECH®

Time is money, so make it count.

If you want to improve your machining processes, cycle time is a key factor to examine. Our customer was experiencing lengthy cycle times while machining pumps from grey cast iron. The parts required three bored holes, each with a 304.8 mm depth and a 558.8 mm reach.

In order to free up machine time, the customer questioned if their process could be more efficient. The main objectives were to decrease the current cycle time and to maintain a 4 Ra finish, which was required to perform the burnishing process that followed.

The previous tooling ran at a slow 11.938 mm/min and a slow 84-minute cycle time to bore the three holes on each part. With our **Wohlhaupter 310 boring head** utilising the **NOVI**TECH **vibration dampening module**, the customer increased to a more efficient 95.25 mm/min and slashed the cycle time to 10.5 minutes (*an 87% decrease*). Along with the increased speed, the Wohlhaupter tooling also achieved a 4 Ra finish, accomplishing everything the customer needed.

The Wohlhaupter solution reduced the process cycle time by 74 minutes. Improvements in speed and cycle time can free up machine hours, which means more throughput and higher profit for your company. ***Are you losing money on applications with substantially long cycle times?***

Product: Wohlhaupter 310 Boring Head with NOVITECH

Objectives: (1) Decrease cycle time
(2) Maintain 4 Ra hole finish

Industry: Oil & gas/petrochemical

Part: Pump

Material: Grey cast iron

Hole Ø: 139.7 mm

Hole Depth: 304.8 mm

Measure	Competitor Boring Head	310 Boring Head w/ NOVITECH
RPM	39	469
Speed Rate	17.069 M/min	205.74 M/min
Feed Rate	0.305 mm/rev	0.203 mm/rev
Penetration Rate	11.938 mm/min	92.25 mm/min
Cycle Time (per hole)	27 min 54 sec	3 min 32 sec
Hole Finish	4 Ra	3.8 Ra

- Boring head 310 series
  Item No. 310008
- NOVITECH vibration dampening intermediate module
  Item No. 519005

74 minute cycle time reduction

© Allied Machine & Engineering CS4001

The Wohlhaupter 310 boring head with the NOVI**TECH **vibration dampening module provided:

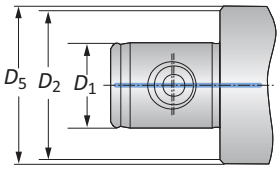

- ✓ Increased penetration rate
- ✓ Decreased cycle time
- ✓ Excellent finish in deep hole application

537 Product Overview

537 Cassettes
FINE BORING

Engineered for easy precision.

537 fine boring cassettes offer high accuracy and are available in an easy-to-use digital or Analogue version. The digital version features a docking port to attach the 3E^{TECH+} digital readout module for µ-accurate diameter adjustments while the Analogue cassettes provide highly accurate adjustments through the vernier scale. 537 cassettes are made of hardened steel and can be used on serrated tool bodies and slides from 100.00 mm - 3255.00 mm. The insert holder can be rotated easily for reverse machining applications.

Experience ***digital precision boring*** for yourself.

- Diameter range: 100.00 mm - 205.00 mm
- Cassette can be used on large diameter serrated slides **(pg. B10-G: 8):** 200.00 mm - 3255.00 mm
- Through coolant
- 3E^{TECH+} module provides a simple digital readout
- Analogue version with a vernier scale
- Max cutting speed: 900 M/min

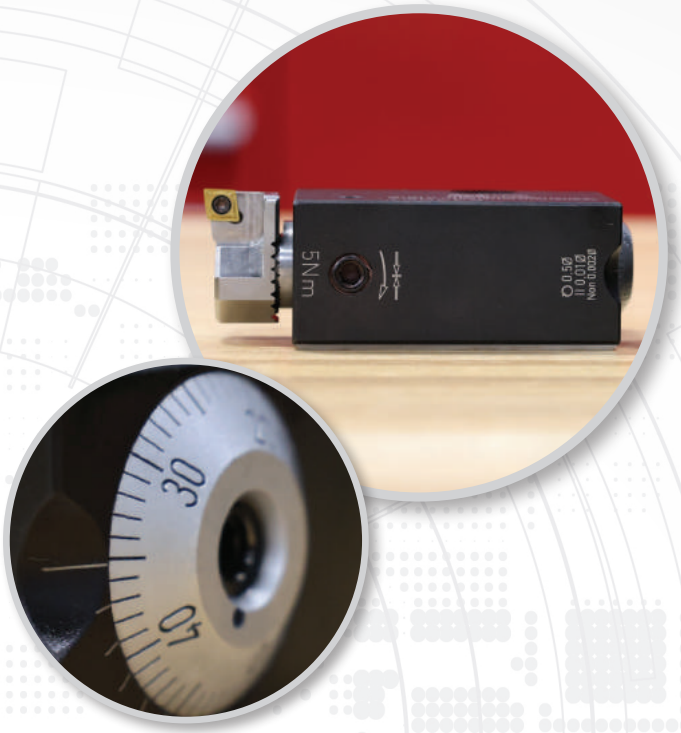

NOTE: 3E^{TECH+} adjustment accuracy of 0.001 mm on diameter

NOTE: Vernier adjustment accuracy of 0.002 mm on diameter

IMPORTANT: Max spindle speed refers to maximum possible speed for an individual boring head and is not a recommended parameter. Refer to page B10-M: 12 for recommended application-specific parameters. Factory technical assistance is available for your specific applications through our Application Engineering department.

Combi-Line Rough and Finish Boring

Wohlhaupter® Rough and Finish Boring

Combi-Line

- Diameter Range: 24.50 mm - 201.00 mm

One tool. Two operations.

The Wohlhaupter Combi-Line combines both rough and finish boring into one operation. The front insert holder is the roughing cutting edge while the shorter holder finishes the hole, saving you time and money.

Your safety and the safety of others is very important. This catalogue contains important safety messages. Always read and follow all safety precautions.

This triangle is a safety hazard symbol. It alerts you to potential safety hazards that can cause tool failure and serious injury.

When you see this symbol in the catalogue, look for a related safety message that may be near this triangle or referred to in the nearby text.

There are safety signal words also used in the catalogue. Safety messages follow these words.

WARNING (shown above) means that failure to follow the precautions in this message could result in tool failure and serious injury.

NOTICE means that failure to follow the precautions in this message could result in damage to the tool or machine but not result in personal injury.

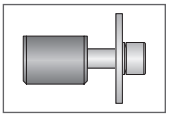

NOTE and **IMPORTANT** are also used. These are important that you read and follow but are not safety-related.

Visit www.alliedmachine.com for the most up-to-date information and procedures.

Combi-Line Product Overview

Combi-Line
ROUGH & FINISH BORING

Two Operations. One Tool.

Decrease cycle time and tool changes with the Wohlhaupter Combi-Line. The Combi-Line combines rough and finish boring into one tool with height displaced insert holders.

Reduce your ***cycle time*** with the Combi-Line.

- Diameter range: 24.50 mm - 201.00 mm
- Reduce cycle and tool changing time
- Available in semi-standard same level or height displaced insert holders
- Through coolant
- 0.002 mm vernier adjustment on finishing insert holder
- Max spindle speed: 1524 m/min

IMPORTANT: Max spindle speed refers to maximum possible speed for an individual boring head and is not a recommended parameter. Refer to page B10-M: 12 for recommended application-specific parameters. Factory technical assistance is available for your specific applications through our Application Engineering department.

60 seconds of
total cycle time saved

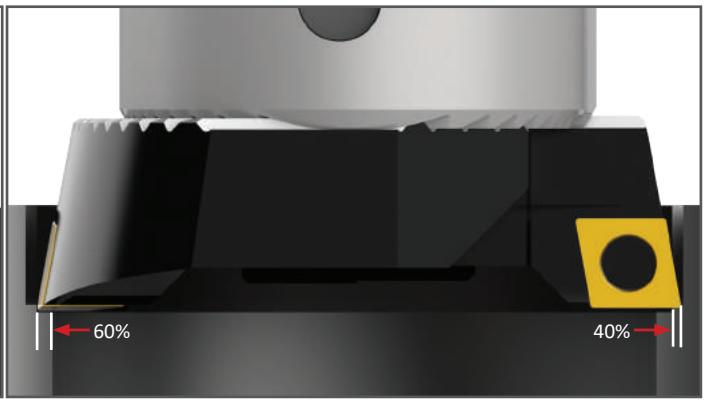

1 tool vs. 2 tools saves you time and money

Material Removal Percentages | Tool Usage | Same-Level Cutting

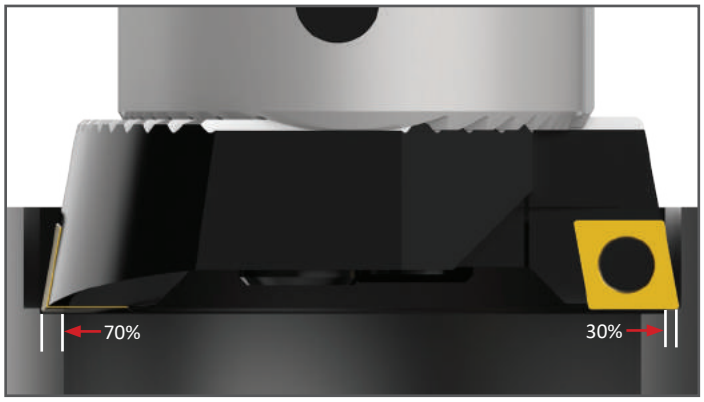

Material Removal Percentages

Material removal up to 4.00 mm on diameter: **50% roughing 50% finishing**

Material removal up to 4.00 mm - 7.00 mm on diameter: **60% roughing 40% finishing**

Material removal up to 7.00 mm - 10.00 mm on diameter:
70% roughing 30% finishing

- For tools with a length-to-diameter ratio greater than 4:1, the existing hole diameter should be no more than 4.00 mm smaller than the finish diameter. The 50% roughing and 50% finishing rule should be applied.
- When boring with severe interruptions, the existing hole diameter should be no more than 4.00 mm smaller than the finish diameter. The 50% roughing and 50% finishing rule should be applied.

IMPORTANT: Consult application engineering for technical support when using Combi-Line tools in holes with interruptions.
email: **engineering.eu@alliedmachine.com**

Tool Usage

- For most applications, the same inserts should be used in both the roughing and finishing insert holders.
- To insure proper chip breaking, the finishing insert holder DOC must be at least 0.50 mm
- Up to a 4:1 length-to-diameter ratio, standard insert holders with a height displacement of up to 0.30 mm can be used.
- Inserts with wiper geometry are recommended only for special Combi-Line applications.

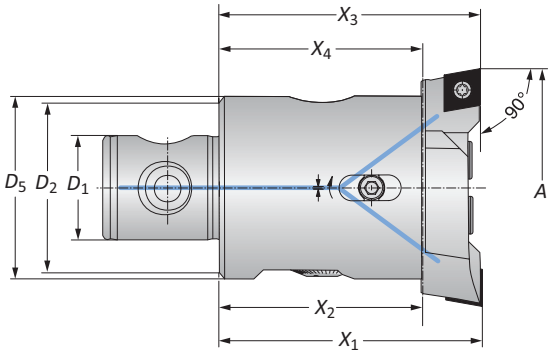

Same-Level Cutting (0.08 mm Height Displacement)

- With length-to-diameter ratios greater than 4:1, same-level insert holders are recommended to reduce the risk of vibration.
- Same-level cutting inserts will create a 0.08 mm step between the roughing and finishing sides.
- Boring blind holes may require the use of same-level insert holders. (If a true 90° flat bottom is required, a secondary operation to clean up the bottom step may be needed.)
- Combi-Line should be applied as a single-effective cutting tool even when same-level insert holders are used.

Boring Heads and Insert Holders

Rough Machining

Wohlhaupter® Rough Machining

Twin Cutters | Chamfering Tools | Grooving Tools | Axial Grooving | Reverse Machining | VolCut

- Diameter Range: 19.50 mm - 245.00 mm

Variety of tooling. Versatile operations.

A versatile range of tools for rough machining includes rough boring, chamfering, reverse machining, circular milling, and axial grooving. The insert holders with various insert pockets as well as height displaced insert holders are able to be easily adjusted for a quick setup process.

Your safety and the safety of others is very important. This catalogue contains important safety messages. Always read and follow all safety precautions.

This triangle is a safety hazard symbol. It alerts you to potential safety hazards that can cause tool failure and serious injury.

When you see this symbol in the catalogue, look for a related safety message that may be near this triangle or referred to in the nearby text.

There are safety signal words also used in the catalogue. Safety messages follow these words.

WARNING

WARNING (shown above) means that failure to follow the precautions in this message could result in tool failure and serious injury.

NOTICE means that failure to follow the precautions in this message could result in damage to the tool or machine but not result in personal injury.

NOTE and **IMPORTANT** are also used. These are important that you read and follow but are not safety-related.

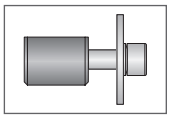

Visit www.alliedmachine.com for the most up-to-date information and procedures.

Applicable Industries

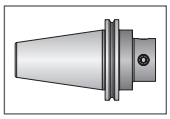

Aerospace | Agriculture | Automotive | Firearms | General Machining | Oil & Gas | Renewable Energy

Roughing Tools
ROUGH MACHINING

Versatile tools for a variety of applications.

- Diameter range: 19.50 mm - 245.00 mm
- Tangential inserts and insert holders also available
- Serrated tool bodies can be used for multiple applications including rough boring, chamfering, back boring, and axial grooving
- Insert holders can be used on large diameter Alu-Line serrated tool bodies and slides located in section G: 100.00 mm - 3255.00 mm

Ⓜ = Metric (mm)

⚠ WARNING **For large diameter boring with VolCut insert holders please:**
- Contact our Application Engineering department before purchasing (*email:* **engineering.eu@alliedmachine.com**)
- Refer to section B10-G in the Wohlhaupter® MultiBore® System Tools catalogue.

VolCut Technical Information

Setup Instructions | Minimum Pilot Calculation

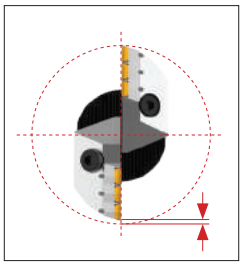

Step 1:
Loosen the mounting screws on both cartridges.

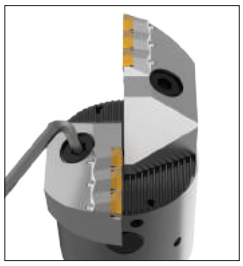

Step 2:
Set one cartridge to the finish diameter by tightening the adjustment screw against the adjustment pin.

Step 3:
Tighten the mounting screws on the cartridge to 15-19 Nm.

Step 4:
Set the opposing cartridge with 4 mm - 5 mm radial offset inward by tightening the adjustment screw against the adjustment pin (optimum situation for each insert to remove equal material).

Step 5:
Tighten the mounting screws on the cartridge to 15-19 Nm.

Note: Drilling systems with OP inserts are used as single cutters. The replaceable inserts are mounted offset in diameter. Please review the assembly instructions.

Minimum Pilot Calculation

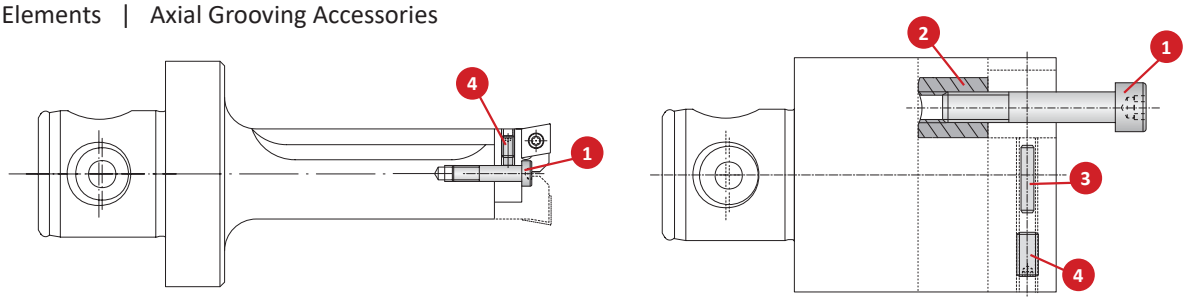

Calculation: Finish Diameter - Opening Range = Minimum Pilot Hole Diameter

Insert Holder	Diameter Range	Opening Range
151019	65.00 mm - 70.00 mm	15.24 mm
	70.00 mm - 83.00 mm	47.75 mm
151039	82.00 mm - 87.00 mm	15.24 mm
	87.00 mm - 103.00 mm	68.07 mm
151059	100.00 mm - 105.00 mm	15.24 mm
	105.00 mm - 130.00 mm	68.07 mm
151069	125.00 mm - 130.00 mm	15.24 mm
	130.00 mm - 205.00 mm	68.07 mm
149030	200.00 mm - 3255.00 mm	68.07 mm

Example: To open an existing hole to 114.30 mm diameter, a 151059 insert holder would be used with a 148007 serrated tool body, and the minimum pilot diameter would be 114.30 mm - 68.07 mm = 46.23 mm.

Increase Tool Stability with Intermediate Modules

- Allow for expanded use of existing components
- Add flexibility to setups
- Reduce need for specials and their associated cost and lead time
- Each component individually balanced

Your safety and the safety of others is very important. This catalogue contains important safety messages. Always read and follow all safety precautions.

This triangle is a safety hazard symbol. It alerts you to potential safety hazards that can cause tool failure and serious injury.

When you see this symbol in the catalogue, look for a related safety message that may be near this triangle or referred to in the nearby text.

There are safety signal words also used in the catalogue. Safety messages follow these words.

⚠ WARNING

WARNING (shown above) means that failure to follow the precautions in this message could result in tool failure and serious injury.

NOTICE means that failure to follow the precautions in this message could result in damage to the tool or machine but not result in personal injury.

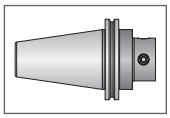

NOTE and **IMPORTANT** are also used. These are important that you read and follow but are not safety-related.

Visit www.alliedmachine.com for the most up-to-date information and procedures.

Intermediate Modules Product Overview

Intermediate MODULES

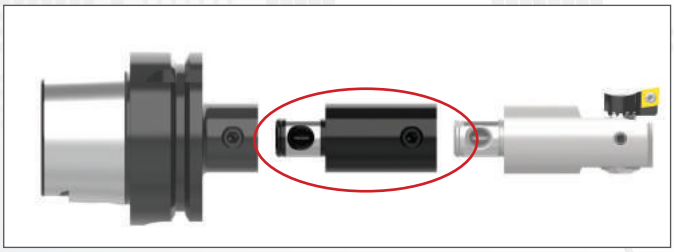

Reducers

Features:

- Improves rigidity by stepping-down to smaller MVS connection sizes
- Connects quickly and easily with the MVS connection
- Accommodates smaller diameter applications

Extensions

Features:

- Used to increase bore depth
- Connects quickly and easily with the MVS connection
- Aluminium components available to reduce stress on the spindle

WOHLHAUPTER® FINE BORING HEAD with NOVI$^{TECH®}$

Are you looking for more from your tooling?

After facing problems with chatter and chipping inserts, our customer, who machines fueling machine head rotors from ASTM A276 - 304L in the nuclear power industry, sought a better solution to their machining process.

The customer turned to Allied for help finding a new solution. Once the causes of insert failure and chatter were identified, our experienced team was able to create the best assembly suitable for the application. Using **Wohlhaupter's analogue balanced fine boring head** paired with the **NOVI^{TECH} vibration dampening module,** they were able to eliminate the issues our customers were facing.

With the previous tooling, the customer achieved only 12 minutes of tool life, but with Allied's Wohlhaupter assembly, they achieved more than four times the life for 65 minutes!

Allied's Wohlhaupter assembly improved the machining process by making it more consistent and saved the customer money by reducing the cost per hole. If you are looking to save time and money, ***give us a call, and we will help you find the right solution.***

Product: Wohlhaupter analogue balanced fine boring head with NOVI^{TECH}

Objectives: (1) Decrease cycle time
(2) Improve process

Industry: Renewable energy/energy

Part: Nuclear fueling machine head rotor

Material: ASTM A276-304L

Hole Ø: 120 mm

Hole Depth: 1040 mm

Measure	Competitor Boring Head	Wohlhaupter Fine Boring Head with NOVI^{TECH}
RPM	106	372
Speed Rate	40 M/min	140 M/min
Feed Rate	0.076 mm/rev	0.16 mm/rev
Penetration Rate	9 mm/min	60 mm/min
Cycle Time	2 hr 10 min	17 min
Tool Life	12 min	65 min
Wohlhaupter offered *93.32%* cost per hole savings over the competitor tooling.		

- Analogue balanced fine boring head
- Boring insert ***Item No. 297994WHC111***
- NOVI^{TECH} vibration dampening intermediate module ***Item No. 519004***

86.92% cycle time reduction

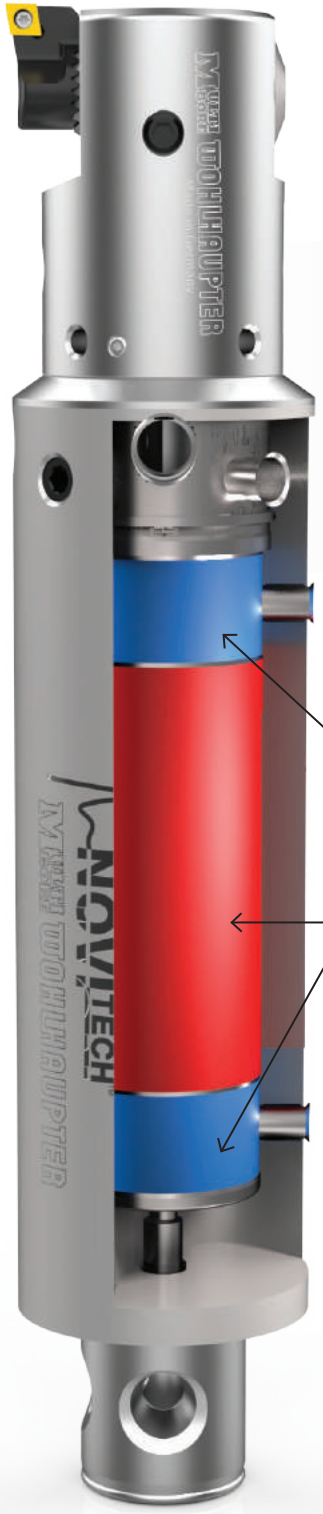

The Wohlhaupter boring head with the NOVI^{TECH} vibration dampening module provided:

- ✓ Increased penetration rate
- ✓ Decreased cycle time
- ✓ Increased tool life
- ✓ Decreased cost per hole

NOVI[TECH®] Vibration Dampening Intermediate Modules Overview

NOVITECH®
Vibration Damping Intermediate Module

THE **DEEP** HOLE **10xD BORING *SOLUTION*** YOU'VE BEEN LOOKING FOR

OUR ***SOLUTION***

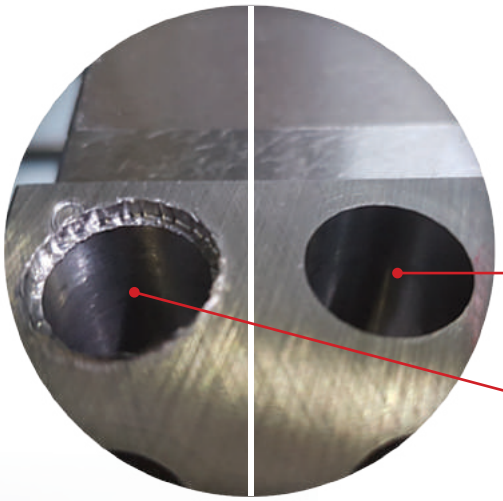

- Machine up to **10xD**
- Connect quickly and easily with the **MVS connection**
- Utilise existing **Wohlhaupter® components**
- **Increase** your productivity, surface quality, and process reliability
- **Increase** your tool and spindle life

YOUR ***ADVANTAGE***

Dampening module with viscoelastic bearing

Absorber mass

THE SURFACE QUALITY TELLS IT ALL

When our customer was machining alloy steel to 9xD, the NOVI[TECH] provided reliable machining, which achieved high surface quality (Ra = 1 µm).

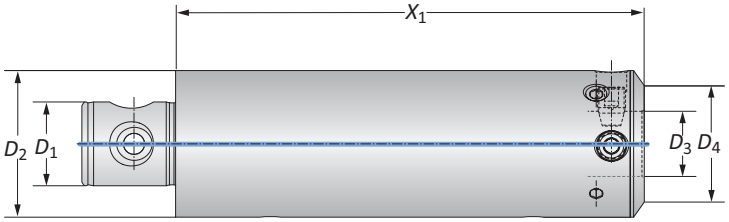

Wohlhaupter NOVI[TECH] with VarioBore precision boring head

Standard tool construction with steel extension

Ⓜ = Metric (mm)

IMPORTANT: Max spindle speed refers to maximum possible speed for an individual boring head and is not a recommended parameter. Refer to page B10-M: 12 for recommended application-specific parameters. Factory technical assistance is available for your specific applications through our Application Engineering department.
email: **engineering.eu@alliedmachine.com**

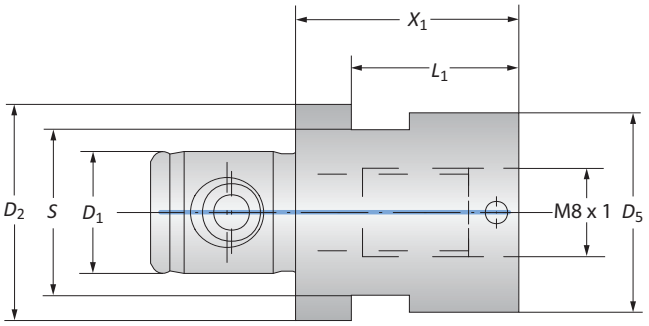

⚠ WARNING **Exceeding weight capacity for machine tool spindle and tool changer can cause machine damage and/or serious injury. To prevent:**
-Consult machine tool builder for machine's weight limitations.
-Refer to example on page B10-M: 11 for calculating tool assembly weight
Factory technical assistance is also available for specific applications through our Application Engineering department. *email:* **engineering.eu@alliedmachine.com**

⚠ WARNING **Tool failure can cause serious injury. To prevent:**
-Do not exceed recommended 10xD length-to-diameter ratio or exceed 4 total components (including shank)
-When using Alu-Line® components, do not exceed recommended 5xD length-to-diameter ratio
-When using tool steel components, do not exceed recommended 6xD length-to-diameter ratio
-When using heavy metal components, do not exceed recommended 8xD length-to-diameter ratio
-When using a carbide shank, do not exceed recommended 9xD length-to-diameter ratio
-When using a NOVI[TECH®] module, do not exceed recommended 10xD length-to-diameter ratio
-Refer to examples on pages B10-M: 8-10 for calculating length-to-diameter ratio
Factory technical assistance is available for your specific applications through our Application Engineering department. *email:* **engineering.eu@alliedmachine.com**

Master Shanks with MVS Connection

Wohlhaupter® Master Shanks with MVS Connection

The MVS Connection

Wohlhaupter MVS connection shanks provide a high level of accuracy when building or replacing components. Our master shanks adapt to any machine tool spindle, making it easy to find the shank you need.

Your safety and the safety of others is very important. This catalogue contains important safety messages. Always read and follow all safety precautions.

This triangle is a safety hazard symbol. It alerts you to potential safety hazards that can cause tool failure and serious injury.

When you see this symbol in the catalogue, look for a related safety message that may be near this triangle or referred to in the nearby text.

There are safety signal words also used in the catalogue. Safety messages follow these words.

⚠ **WARNING**

WARNING (shown above) means that failure to follow the precautions in this message could result in tool failure and serious injury.

NOTICE means that failure to follow the precautions in this message could result in damage to the tool or machine but not result in personal injury.

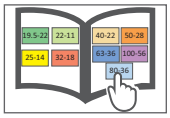

NOTE and **IMPORTANT** are also used. These are important that you read and follow but are not safety-related.

Visit www.alliedmachine.com for the most up-to-date information and procedures.

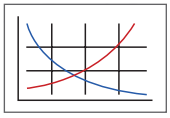

Applicable Industries

Aerospace | Agriculture | Automotive | Firearms | General Machining | Oil & Gas | Renewable Energy

⚠ WARNING **Exceeding weight capacity for machine tool spindle and tool changer can cause machine damage and/or serious injury. To prevent:**
-Consult machine tool builder for machine's weight limitations.
-Refer to example on page B10-M: 11 for calculating tool assembly weight
Factory technical assistance is also available for specific applications through our Application Engineering department. *email: engineering.eu@alliedmachine.com*

⚠ WARNING **Tool failure can cause serious injury. To prevent:**
-Do not exceed recommended 10xD length-to-diameter ratio or exceed 4 total components (including shank)
-When using Alu-Line® components, do not exceed recommended 5xD length-to-diameter ratio
-When using tool steel components, do not exceed recommended 6xD length-to-diameter ratio
-When using heavy metal reducers, do not exceed recommended 8xD length-to-diameter ratio
-When using a carbide shank, do not exceed recommended 9xD length-to-diameter ratio
-When using a NOVI$^{TECH®}$ module, do not exceed recommended 10xD length-to-diameter ratio
-Refer to examples on pages B10-M: 8-10 for calculating length-to-diameter ratio
Factory technical assistance is available for your specific applications through our Application Engineering department. *email:* **engineering.eu@alliedmachine.com**

Large Diameter Boring

Wohlhaupter® Large Diameter Boring

Basic D 40 | Basic D 60 | Eco D 60 | Flex D 60

- Diameter Range: 200.00 mm - 3255.00 mm

Boring Big?

Wohlhaupter has continued to expand our large diameter boring capabilities with Alu-Line. Our Alu-Line serrated slides and tool bodies are made of lightweight aluminium alloy to minimise the weight while still getting the heavy boring job done. The versatile serrated slides and serrated tool bodies allow for boring 200.00 mm up to 3255.00 mm, offering the most powerful and versatile tool ranges to our customers.

Applicable Industries

Aerospace | Agriculture | Automotive | Firearms | General Machining | Oil & Gas | Renewable Energy

Your safety and the safety of others is very important. This catalogue contains important safety messages. Always read and follow all safety precautions.

This triangle is a safety hazard symbol. It alerts you to potential safety hazards that can cause tool failure and serious injury.

When you see this symbol in the catalogue, look for a related safety message that may be near this triangle or referred to in the nearby text.

There are safety signal words also used in the catalogue. Safety messages follow these words.

⚠ WARNING

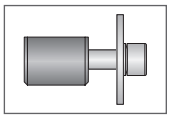

WARNING (shown above) means that failure to follow the precautions in this message could result in tool failure and serious injury.

NOTICE means that failure to follow the precautions in this message could result in damage to the tool or machine but not result in personal injury.

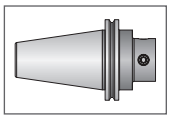

NOTE and **IMPORTANT** are also used. These are important that you read and follow but are not safety-related.

Visit www.alliedmachine.com for the most up-to-date information and procedures.

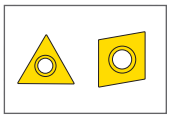

Reference Icons
The following icons will appear throughout the catalogue to help you navigate between products.

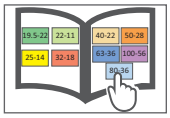

Clamping Elements
For use with insert holders and boring heads

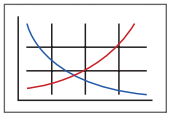

Shanks
A variety of shanks for different machines

Inserts
For use with insert holder boring heads and boring bars using indexable inserts

MVS Connection Colour Guide
Detailed instructions and information regarding the MVS connection(s)

Recommended Cutting Data
Speed and feed recommendations for optimum and safe boring

Through Coolant Option
Indicates that the product is through coolant

Series	Diameter Range Metric (mm)
Basic D 40 Slides	200.00 - 520.00
Basic D 60 Slides	200.00 - 505.00
Eco D 60 Slides	465.00 - 1020.00
Flex D 60 Slides	500.00 - 3255.00

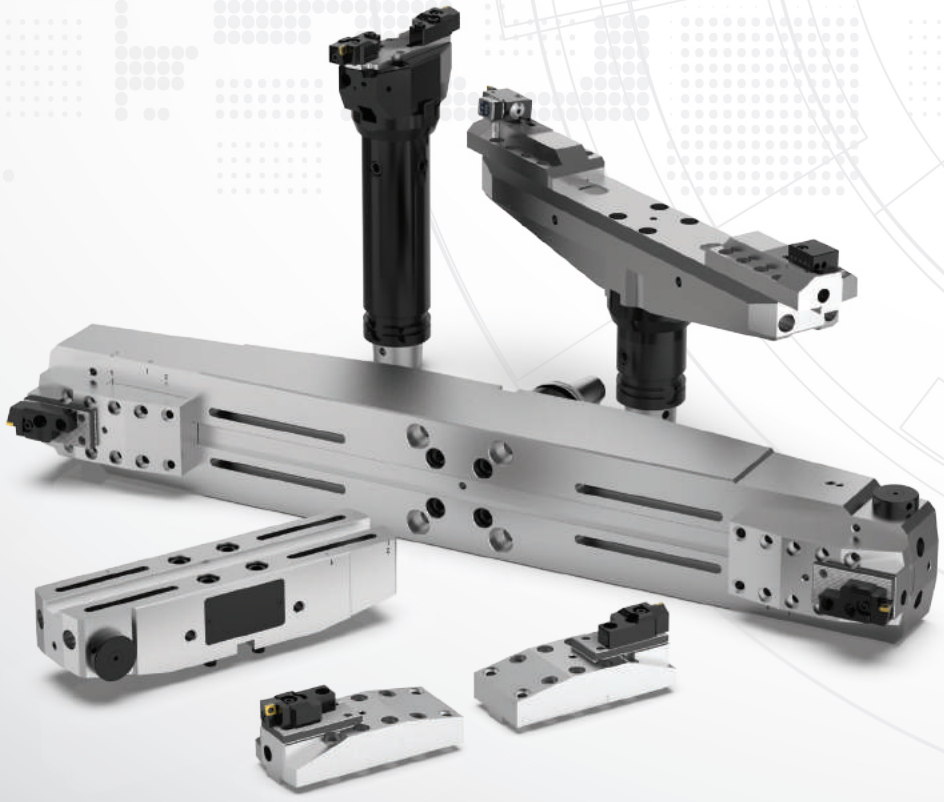

Large Diameter BORING

Boring big? We've got you covered.

Our versatile tooling system can provide the power and precision your large diameter boring jobs demand. The large diameter boring system offers four different Alu-Line serrated slides, a wide range of rough and finish boring insert holders, vernier and digital cassettes, and combined rough and finish insert holders.

- Diameter range: 200.00 mm - 3255.00 mm
- Basic, Eco, and Flex serrated slides
- Roughing, finishing, or combined roughing and finishing can be achieved in one pass
- Digital readout cassettes available for quick and easy adjustments
- Alu-Line serrated slides and tool bodies are made of lightweight aluminium

⚠ WARNING **Exceeding weight capacity for machine tool spindle and tool changer can cause machine damage and/or serious injury. To prevent:**
-Consult machine tool builder for machine's weight limitations.
-Refer to example on page B10-M: 11 for calculating tool assembly weight
Factory technical assistance is also available for specific applications through our Application Engineering department. *email:* **engineering.eu@alliedmachine.com**

⚠ WARNING **Tool failure can cause serious injury. To prevent:**
-Do not exceed recommended 10xD length-to-diameter ratio or exceed 4 total components (including shank)
-When using Alu-Line® components, do not exceed recommended 5xD length-to-diameter ratio
-When using tool steel components, do not exceed recommended 6xD length-to-diameter ratio
-When using heavy metal components, do not exceed recommended 8xD length-to-diameter ratio
-When using a carbide shank, do not exceed recommended 9xD length-to-diameter ratio
-When using a NOVI^{TECH} module, do not exceed recommended 10xD length-to-diameter ratio
-Refer to examples on pages B10-M: 8-10 for calculating length-to-diameter ratio
Factory technical assistance is available for your specific applications through our Application Engineering department. *email:* **engineering.eu@alliedmachine.com**

WARNING **Exceeding weight capacity for machine tool spindle and tool changer can cause machine damage and/or serious injury. To prevent:**
-Consult machine tool builder for machine's weight limitations.
-Refer to example on page B10-M: 11 for calculating tool assembly weight
Factory technical assistance is also available for specific applications through our Application Engineering department. *email:* **engineering.eu@alliedmachine.com**

WARNING **Tool failure can cause serious injury. To prevent:**
-Do not exceed recommended 10xD length-to-diameter ratio or exceed 4 total components (including shank)
-When using Alu-Line® components, do not exceed recommended 5xD length-to-diameter ratio
-When using tool steel components, do not exceed recommended 6xD length-to-diameter ratio
-When using heavy metal components, do not exceed recommended 8xD length-to-diameter ratio
-When using a carbide shank, do not exceed recommended 9xD length-to-diameter ratio
-When using a NOVI^{TECH} module, do not exceed recommended 10xD length-to-diameter ratio
-Refer to examples on pages B10-M: 8-10 for calculating length-to-diameter ratio
Factory technical assistance is available for your specific applications through our Application Engineering department. *email:* **engineering.eu@alliedmachine.com**

Inserts

Wohlhaupter® Inserts

Replaceable Boring Inserts

Cutting-Edge Technology

Wohlhaupter has the cutting-edge technology to achieve all of your boring applications. With precision in mind, our inserts are available in multiple insert geometries, coatings, and nose radii. Wohlhaupter inserts are offered in uncoated and coated carbide, cermet, as well as CBN and PCD materials.

Try our easy-to-use boring insert selector available online or to download from the app store to find the perfect inserts for your boring applications.

Your safety and the safety of others is very important. This catalogue contains important safety messages. Always read and follow all safety precautions.

This triangle is a safety hazard symbol. It alerts you to potential safety hazards that can cause tool failure and serious injury.

When you see this symbol in the catalogue, look for a related safety message that may be near this triangle or referred to in the nearby text.

There are safety signal words also used in the catalogue. Safety messages follow these words.

⚠ WARNING

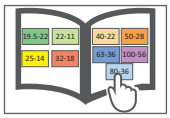

WARNING (shown above) means that failure to follow the precautions in this message could result in tool failure and serious injury.

NOTICE means that failure to follow the precautions in this message could result in damage to the tool or machine but not result in personal injury.

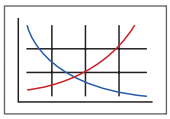

NOTE and **IMPORTANT** are also used. These are important that you read and follow but are not safety-related.

Visit www.alliedmachine.com for the most up-to-date information and procedures.

WOHLHAUPTER®

Boring Insert Selector

Find the best insert for your application.

- Generate the correct boring insert for your job in just six easy steps
- Choose type, shape, substrate, insert form, nose radius, and material
- Order easily by adding the item to your cart

Cermet | Carbide

Cermet | Carbide

Geometry	Description	Application	Available Form
108 	• Sintered chip breaker for higher feeds • Suitable for highly discontinuous cuts	▼▼▼ ▼	F101, F103, F104, F112, F113
109 	• Sintered geometry with V-shaped chip breaker for roughing & finishing • Good chip control even for shallow depth of cut	▼▼▼ ▼	F101, F103, F104
112 	• Sintered chip breaker • Finishing & light roughing	▼▼▼ ▽	F101, F103
121 	• Positive geometry with stable cutting edge • Finishing in different material groups • Good chip control	▼▼▼	F20, F211
122 	• Sintered chip breaker • Good chip control - even with long-chipping materials	▼▼▼	F101, F103, F161
126 	• Sintered version with a wide range of applications	▼	F105
127 	• Highly positive sintered geometry • For non-ferrous metals & cast iron	▼▼▼ ▼	F37, F39, F101, F103, F104, F112, F113
128 	• Highly positive sintered geometry • Polished for finishing non-ferrous metals, cast iron, & steel	▼▼▼	F20
129 	• Highly positive chip breaking geometry • Polished for non-ferrous metals, cast iron, & steel • Ideal for structural steel applications	▼▼▼ ▼	F37, F39, F101, F103
145 	• Geometry for finishing in smooth & discontinuous cut • Good chip control - even with long-chipping materials	▼▼▼ ▼	F101, F103, F112, F113, F161
146 	• Positive geometry with stable cutting edge • Universal usage for roughing, finishing and chamfering	▼▼▼ ▼	F037, F039, F101, F103, F104, F112, F113,

Wohlhaupter Insert Geometries

Cermet | Carbide

Cermet | Carbide

Geometry		Description	Application	Available Form
155		• Positive sintered geometry • Special cutting edge design in combination with the chip breaker design enables exceptional chip control even at shallow cutting depths & light feeds	▼▼▼	F20, F101, F103, F39
158		• Stable sintered geometry for roughing & finishing with & without discontinuous cuts	▼▼▼ ▼	F101, F103, F104, F105, F113, F114, F163
174W		• Wiper geometry for highly productive turning & boring • Can be used with pitch angle 92° - 95° • Good chip breaking properties even at lower feed rates	▼▼▼ ▽	F101, F103
192		• Sintered version for a variety of applications • Low cutting pressure because of sharp cutting edge prep	▼▼▼ ▼	F39, F101, F103, F104, F112, F113, F163, F161, F262, F264
199		• Positive sintered geometry for wide variety of applications • Special chip breaker allows chip control with different radial depth of cut	▼▼▼ ▼	F101, F103, F104, F112, F113
200		• Highly positive sintered geometry • Applicable for various material groups for low cutting pressure	▼▼▼ ▼	F39, F101, F103, F104, F264
650		• Obliquely ground chip breaker reduces cutting forces • Finishing & smooth interrupted cuts	▼▼▼	F20, F211
711		• Negative geometry with 0 rake suitable for fine finishing and semi roughing • Machined materials in groups K & H • Continuous and moderately interrupted cut	▼▼▼ ▼	F101, F103, F104, F113, F163
840		• Parallel ground chip breaker • For finish operations with stable cutting edge	▼▼▼	F20
850		• Parallel ground chip breaker • Good chip control with short to medium feeds	▼▼▼	F161
860		• Parallel ground chip breaker reduces cutting forces • Stable for a wide range of applications	▼▼▼ ▼	F101, F103, F104, F105, F325

Wohlhaupter Insert Geometries

Tangential | Ceramic

Tangential

Geometry	Description	Application	Available Form
880 	• Large parallel ground chip breaker with 10° rake angle for reduced cutting force	▼	F04, F05
811 	• Smooth geometry without additional ground chip breaker • Reinforced cutting edges provide stability • Excellent for cast materials	▼	F05

Ceramic

Geometry	Description	Application	Available Form
711 	• Smooth geometry with 0° rake angle • High cutting edge stability particularly in discontinuous cuts	▼	F75, F103, F104, F123

Wohlhaupter Insert Geometries

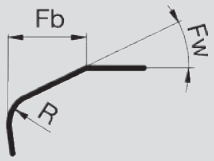

PCD | CBN

PCD

Geometry	Description	Application	Available Form
720 	• Smooth geometry in positive version with 7° rake angle for PCD • Sharp cutting edge	▼▼▼	F20, F101, F103
730 	• Smooth geometry with 0° rake angle for PCD • Sharp cutting edge	▼▼▼	F20, F39, F75, F101, F103, F123, F211, F262, F264
735 	• Smooth geometry • Laser-cut chip breaker for PCD • Suitable for long-chipping aluminium wrought alloys	▼▼▼	F20, F39, F101, F103, F211, F262, F264

CBN

Geometry	Description	R	Fb	Fw	Application	Available Form
741 	• Smooth geometry with 0° rake angle for CBN • Rounded cutting edge with 30° chamfer	0.015	0.15	30°	▼▼▼	F20, F101, F103

Technical Information

Surface Finish | General Formulas

The corner radius of replaceable inserts is very important in finish machining. Large corner radii 0.8 mm (0.031") or higher allow for high feed rates with good surface quality.

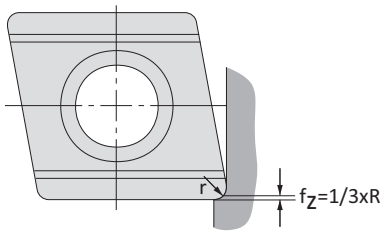

The expected surface quality can be estimated by using the function of corner radius and feed rate formula.

1. The larger the corner radius and the lighter the feed rate is, the better the surface quality.

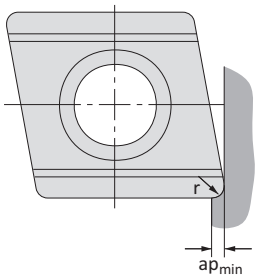

2. If the feed is approximately 1/3 of the corner radius, the better the machining time and surface finish will be in finish machining applications.

3. A larger corner radius increases radial forces, which can negatively affect dimensional accuracy. Large corner radii also require increased depth of cut.

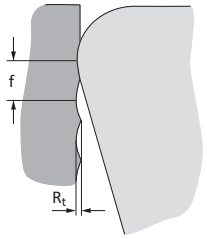

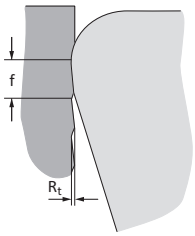

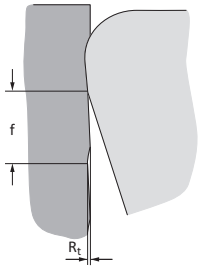

Minimum depth of cut (a_p) should at least match the corner radius. This minimizes the radial forces.

General Formulas		
Cutting Speed	$\frac{Vc = D \times \pi \times n}{1000}$	**(M/min)**
RPM	$\frac{n = Vc \times 1000}{D \times \pi}$	**(min^{-1})**
Feed Speed	$V_f = f \times n$	**(mm/min)**
	D = Machining Ø	**(mm)**
	f= Feed	**(mm/u)**
	V_c= Cutting Speed	**(M/min)**
	n = RPM	**(min^{-1})**

Technical Information

Wiper Geometries

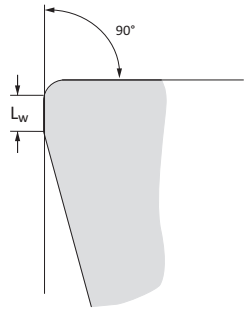

Replaceable Inserts with Wiper Geometry	
Insert with conventional corner radius with feed (f)	
Insert with wiper geometry radius with same feed (f)	
Insert with wiper geometry with increased feed (f)	

Wiper Geometry for 90° Approach Angle

Replaceable inserts produce a right-angled step at the bottom of the hole. When used in a Wohlhaupter standard insert holder that has a 90° approach angle, the secondary wiper cutting edge is nearly parallel with the wall of the hole.

Wiper geometry for 90° approach angle

Lw = length of the wiper secondary cutting edge

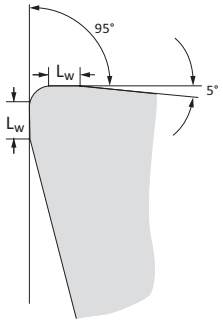

Wiper Geometry for 95° Approach Angle

Wiper inserts can also be used with 95° insert holders, which are included in the Wohlhaupter standard insert range.

Wiper geometry for 95° approach angle (left and right cutting)

Lw = length of the secondary wiper cutting edge

*Not to exceed max recommended RPM for boring head found in corresponding Wohlhaupter Operation Manual

Deep Hole Boring Speed Adjustment

⚠ For Dynamic Boring Tool Length				
Boring Type	**7xD**	**8xD**	**9xD**	**10xD**
Roughing	❖	❖	❖	❖
Finishing	0.70	0.50	0.30	❖

❖ Contact our Application Engineering department for assistance when boring these depths without NOVI^{TECH}.

Deep Hole Boring Speed Adjustment

⚠ For Dynamic Boring Tool NOVI^{TECH} Length			
Boring Type	**8xD**	**9xD**	**10xD**
Roughing	0.80	0.60	0.40
Finishing	0.90	0.70	0.50

*Not to exceed recommended RPM printed on NOVI^{TECH} module

Recommended Speed Example

If the recommended speed for a finish boring assembly under 5xD is 120 M/Min, then the speed for a 10xD finish boring assembly in the same application would be 60 M/Min (120 M/Min x 0.50 = 60 M/Min)

5xD = 120 M/Min	10xD = 60 M/Min

IMPORTANT: Max spindle speed refers to maximum possible speed for individual boring head and is not a recommended parameter. Factory technical assistance is available for your specific applications through our Application Engineering department. *email:* **engineering.eu@alliedmachine.com**

⚠ **WARNING** **Tool failure can cause serious injury. To prevent:**

-Do not exceed recommended 10xD length-to-diameter ratio or exceed 4 total components (including shank)
-When using Alu-Line components, do not exceed recommended 5xD length-to-diameter ratio
-When using tool steel components, do not exceed recommended 6xD length-to-diameter ratio
-When using heavy metal components, do not exceed recommended 8xD length-to-diameter ratio
-When using a carbide shank, do not exceed recommended 9xD length-to-diameter ratio
-When using a NOVI^{TECH} module, do not exceed recommended 10xD length-to-diameter ratio
Factory technical assistance is available for your specific applications through our Application Engineering department. *email:* **engineering.eu@alliedmachine.com**

Boring Insert Wear Patterns

Built-up Edge

Potential Problem

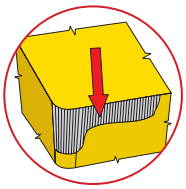

- Machined material adheres to the cutting edge of insert
- When it breaks, the edge becomes brittle and cracks
- This can negatively affect machined surface

Possible Solution

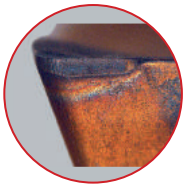

- Increase temperature by increasing speed or feed
- Use an insert with higher lubricity coating
- Choose a freer cutting insert geometry

Flank Wear

Potential Problem

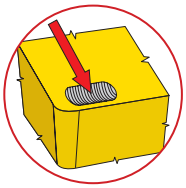

- Caused by friction between the insert and machined material
- It cannot be fully eliminated, but it can be reduced

Possible Solution

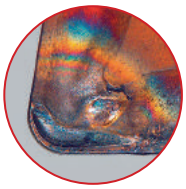

- Use a more wear-resistant grade
- Reduce cutting speed
- Use coolant or increase coolant flow to the cutting edge

Cratering

Potential Problem

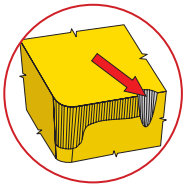

- Appears when the geometry is too neutral or material is too hard for the substrate

Possible Solution

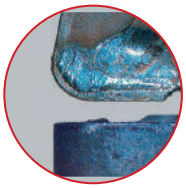

- Use a more wear-resistant grade
- Reduce cutting speed or feed
- Use coolant or increase coolant flow to the cutting edge

Notch Wear

Potential Problem

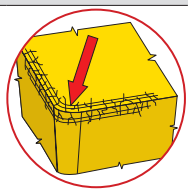

- Occurs when cutting edge of insert comes in contact with surface of machined material
- Caused by hardening of surface layer of material and burrs
- Often appears on stainless austenitic steels and other high-temperature alloy steels

Possible Solution

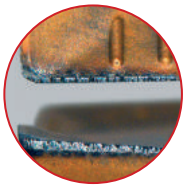

- Use a more wear-resistant grade (Al_2O_3)
- Select a tool with a smaller approach angle
- Vary the radial depth of cut
- Use coolant or increase coolant flow to the cutting edge

Comb Cracks

Potential Problem

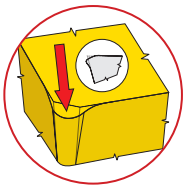

- Caused by high stress on the cutting edge during interrupted cuts

Possible Solution

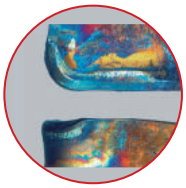

- Switch off coolant or increase coolant flow to obtain an even temperature level
- Reduce cutting speed
- Use tougher insert grade

Plastic Deformation

Potential Problem

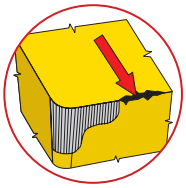

- Caused by high thermal stress on the cutting edge from excessive feed rate and cutting speed

Possible Solution

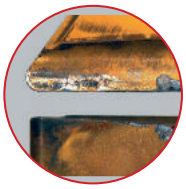

- Use a more wear-resistant grade
- Reduce cutting speed
- Reduce feed rate
- Use coolant or increase coolant flow to the cutting edge

Chipping of Cutting Edge (Out of Cut)

Potential Problem

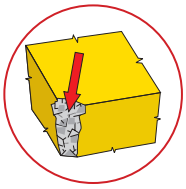

- Caused by poor chip control
- Can damage the portion of the cutting edge that might not be engaged in the cut

Possible Solution

- Change feed rate to gain chip control
- Select a tool with a different approach angle
- Use an insert with a different geometry
- Use a tougher grade of carbide

Insert Fracture

Potential Problem

- Caused by workpiece material, grade, condition, the rigidity of the machine-tool workpiece, extent of wear, and cutting conditions

Possible Solution

- Use a tougher grade of carbide
- Reduce the feed and depth of cut
- Use an insert with a stronger chip breaker
- Use an insert with a bigger corner radius

Tapping Chucks | Boring Bar Blanks

Clamping Tools with MVS Connection

Wohlhaupter offers a complete range of tool holders that incorporates the MVS connection. Our clamping tools allow for smaller MVS tools to connect and provide a quick and inexpensive alternative to special tooling. Many of the clamping tools also feature coolant-through capabilities.

Your safety and the safety of others is very important. This catalogue contains important safety messages. Always read and follow all safety precautions.

This triangle is a safety hazard symbol. It alerts you to potential safety hazards that can cause tool failure and serious injury.

When you see this symbol in the catalogue, look for a related safety message that may be near this triangle or referred to in the nearby text.

There are safety signal words also used in the catalogue. Safety messages follow these words.

⚠ WARNING

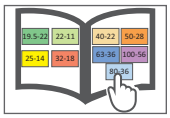

WARNING (shown above) means that failure to follow the precautions in this message could result in tool failure and serious injury.

NOTICE means that failure to follow the precautions in this message could result in damage to the tool or machine but not result in personal injury.

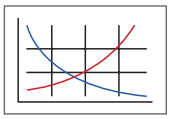

NOTE and **IMPORTANT** are also used. These are important that you read and follow but are not safety-related.

Visit www.alliedmachine.com for the most up-to-date information and procedures.

UPA Versatile Boring Heads

Wohlhaupter® UPA Versatile Boring Heads

UPA 3 | UPA 4 | UPA 5-S 6

- Diameter Range: 0.00 mm - 620.00 mm

Operation Facing and Boring

In 1936, the first model of the Wohlhaupter Universal Facing and Boring head was developed to launch the start of Wohlhaupter boring products. It became a staple to the boring industry.

Universal Facing and Boring heads are used on universal milling and boring machines, boring mills, and jig boring machines for machining stationary workpieces in individual and batch productions.

Applicable Industries

Aerospace | Agriculture | Automotive | Firearms | General Machining | Oil & Gas | Renewable Energy

Your safety and the safety of others is very important. This catalogue contains important safety messages. Always read and follow all safety precautions.

This triangle is a safety hazard symbol. It alerts you to potential safety hazards that can cause tool failure and serious injury.

When you see this symbol in the catalogue, look for a related safety message that may be near this triangle or referred to in the nearby text.

There are safety signal words also used in the catalogue. Safety messages follow these words.

⚠ WARNING

WARNING (shown above) means that failure to follow the precautions in this message could result in tool failure and serious injury.

NOTICE means that failure to follow the precautions in this message could result in damage to the tool or machine but not result in personal injury.

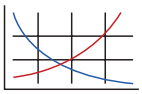

NOTE and **IMPORTANT** are also used. These are important that you read and follow but are not safety-related.

Visit www.alliedmachine.com for the most up-to-date information and procedures.

UPA Boring Head
FACING AND BORING

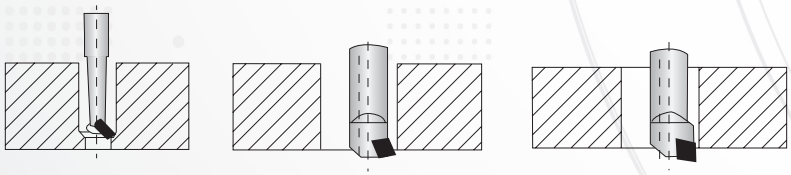

Universal Facing and Boring Heads

The versatile Wohlhaupter UPA boring heads can be used for facing, boring, and taper turning. They can also be used for right- or left-handed turning.

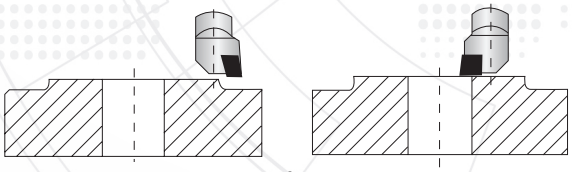

Precise and ***versatile*** boring heads.

- Diameter range: 0.00 mm - 620.00 mm
- Slide adjustment up to 112.00 mm
- Can be used in a variety of operations

UNIVERSAL
FACING AND BORING *Applications*

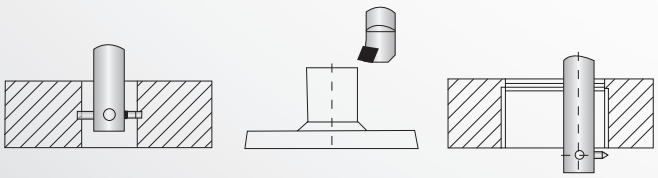

Boring with different tools

Facing

From inside outward

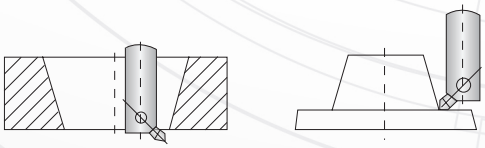

From outside inward

Recessing

Outside Turning

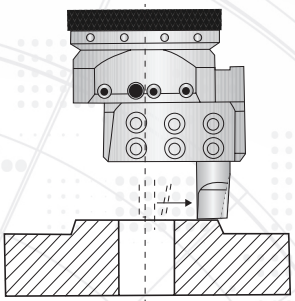

Thread Cutting

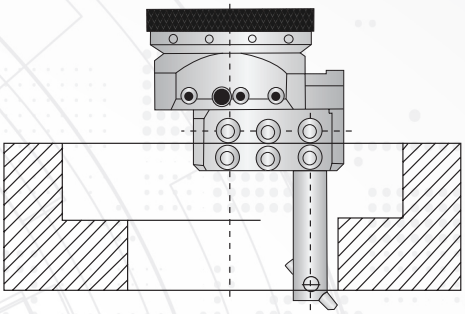

Taper Turning

UNIVERSAL

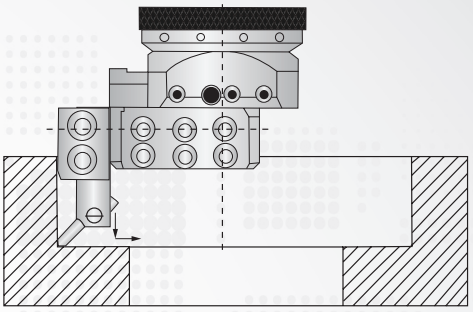

FACING & BORING *Application Examples*

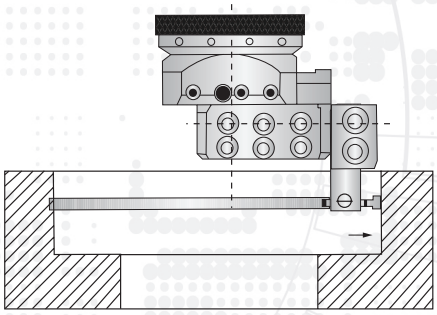

Facing with boring bar directly in slide

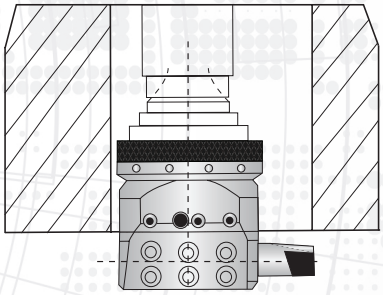

Boring with long boring bar

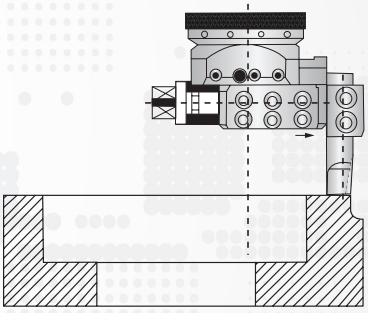

Boring and facing with short boring bar holder and a boring bar

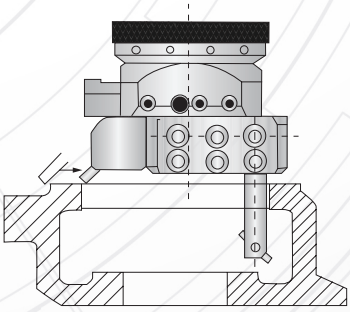

Recessing with short boring bar holder and a boring bar

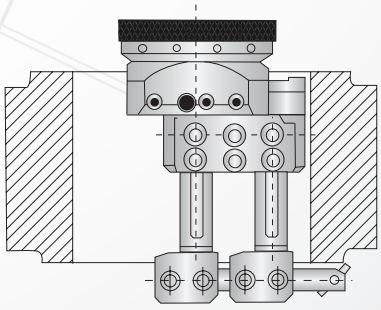

Deep hole boring with boring bar directly in slide

Large diameter facing with a long boring bar holder

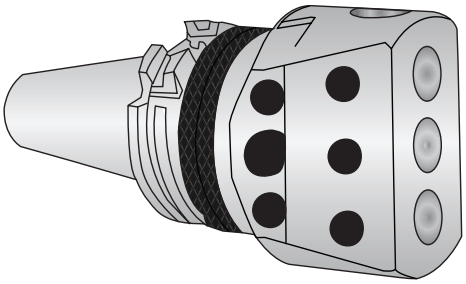

Facing in two areas with one boring bar and a boring bar holder

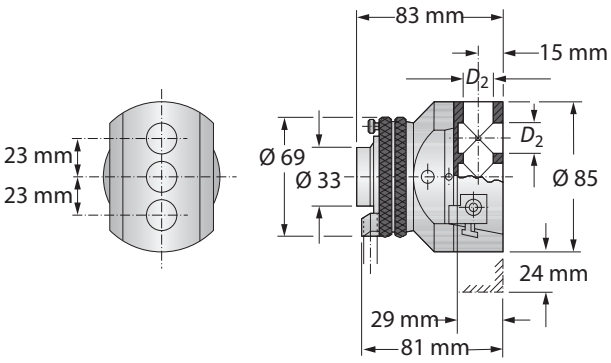

Facing the reverse side by using boring bar holders contained in attachment

ES-Bore Fine Boring Lay Down Cartridge

DIGITAL ES-BORE WITH ADAPTER PLATE

NOTE: ES-Bore digital fine boring cartridges must be used with the new **3E**$^{TECH+}$ and adapter plate. The ES-Bore cannot be used with 3E^{TECH}.

NOTE: 3E^{TECH+} adjustment accuracy of 0.001 mm on diameter

ANALOG ES-BORE

LAY DOWN CARTRIDGES

ES-BORE

- Mounts to custom designed boring tools
- Available with digital 3E^{TECH+} or analog adjustment
- Accurate adjustments with easy-to-use settings
- Versatility in many different application types over 1.102" (28.00 mm)

GROOVING TOOLS

EK GROOVER

- Create complex grooves faster and deeper than ever before
- Eliminate chatter in hard-to-reach internal forms
- The electronically-controlled insert release can be adapted to most machine tools
- Single or double grooving in one operation

ROUGH BORING TOOLS

LAY DOWN CARTRIDGE

- Increase the productivity of your roughing tool while protecting your investment
- If the tool is ever damaged, simply replace a cartridge and resume making chips

SPECIAL BORING TOOLS

ANTI-VIBRATION

- Vibration dampening rings
- Optimized tool weight
- Used to reduce harmonic vibration in deeper boring applications

SPECIAL BORING TOOLS

MULTISTEP BORING TOOL

- Fine adjustment tool for reverse machining
- Combined with multidiameter fine adjustable cartridges for finish machining

SPECIAL BORING TOOLS

OD TURNING TOOLS

- Multistep OD turning
- Drastically reduce cycle time
- Improve surface finish and feature concentricity

SPECIAL BORING TOOLS

PADDED TOOLING

- Aids in stable part processing
- Expands length to diameter capabilities
- Improves surface finish
- Pads are replaceable to extend tool life

NOTE: 3E^{TECH+} adjustment accuracy of 0.001 mm on diameter

NOTE: 3E^{TECH+} adjustment accuracy of 0.001 mm on diameter

3E^{TECH+} BORING TOOL

MULTISTEP BORING TOOL

- Easy diameter adjustments with 3E^{TECH+}
- One digital readout module to use on all steps

3E^{TECH+} BORING TOOL

LINE BORING TOOL

- One digital readout module used on all steps
- Easy diameter adjustment at the machine spindle

DigiBore Special Boring Tools

NOTE: Metric item pictured

NOTE: Digital adjustment accuracy of 0.002 mm on diameter

NOTE: Metric item pictured

NOTE: Digital adjustment accuracy of 0.002 mm on diameter

FINISH BORING TOOLS

DIGIBORE WITH 249 (248)

- Standard DigiBore head, standard 249 (248) head, and special slide for precise two-step bore
- MVS connection

FINISH BORING TOOLS

DIGIBORE SPECIAL

- Standard DigiBore boring head with OD turn and OD chamfer insert holder
- MVS connection

Combi-Line Special Boring Tool

ROUGH, FINISH, and CHAMFER BORING TOOLS

COMBI-LINE

- Standard Combi-Line tooling with added chamfer cartridge
- MVS connection

Online Tools

ToolMD® | Wohlhaupter® Boring Insert Selector

ToolMD®

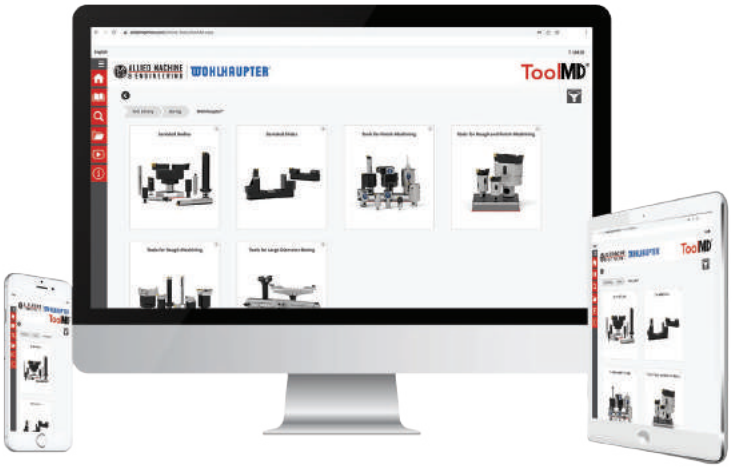

www.toolmd.com

Design Your Own Solutions

ToolMD is a configurator for Wohlhaupter modular tooling systems that allows customers to virtually build their own solution. This online-based simulator puts the entire Wohlhaupter product line at your fingertips. It provides a digital bank of every individual part that Wohlhaupter manufactures in either inch or metric.

Once you select a component, you will be guided by a series of user-friendly prompts to select the next components until you have built your tooling system. Throughout the process, you can monitor the size of your custom tool and ensure what you're building matches your real-life specifications. Once a complete system is virtually assembled, the program will render the tool in either a 2D or 3D drawing to view on your device.

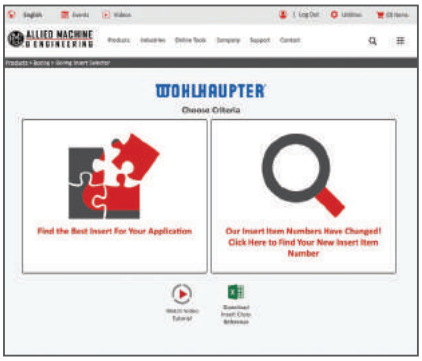

Designing your tools with ToolMD saves you time and allows you to instantly obtain the right tool for the job.

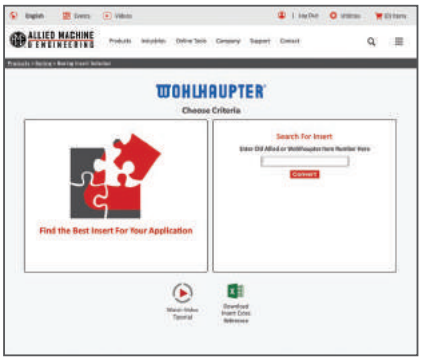

Design anytime from anywhere.
Available online 24/7.

WOHLHAUPTER® | Boring Insert Selector

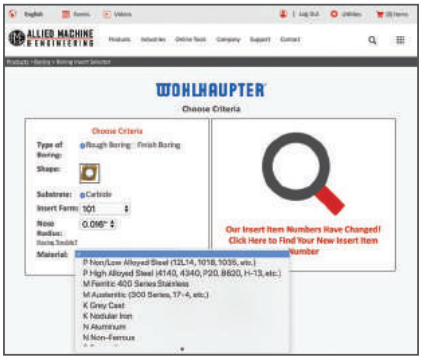

www.alliedmachine.com/bis

- Generate the correct boring insert for your application in just six easy steps

- Search for your new insert item number by entering your old item number

- Choose type, shape, substrate, insert form, nose radius, and workpiece material
- Order easily by adding the item to your cart

Lay Down Cartridges

Wohlhaupter® Lay Down Cartridges

Holders for Pre-Machining | Holders for Compact Boring Bars | Short Clamp Holders | Fine Boring Holders

Robust. Powerful. Versatile. Engineered Solutions.

From pre-machining holes with heavy stock removal to finish machining with tight tolerances and excellent surface finish, Wohlhaupter's extensive range of lay down cartridges can help you achieve specific boring solutions. Wohlhaupter's lay down cartridges bring innovative concepts designed to improve productivity, reduce scrap, and reduce the cost per part.

Your safety and the safety of others is very important. This catalogue contains important safety messages. Always read and follow all safety precautions.

This triangle is a safety hazard symbol. It alerts you to potential safety hazards that can cause tool failure and serious injury.

When you see this symbol in the catalogue, look for a related safety message that may be near this triangle or referred to in the nearby text.

There are safety signal words also used in the catalogue. Safety messages follow these words.

⚠ WARNING

WARNING (shown above) means that failure to follow the precautions in this message could result in tool failure and serious injury.

NOTICE means that failure to follow the precautions in this message could result in damage to the tool or machine but not result in personal injury.

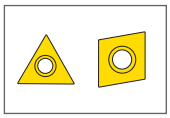

NOTE and **IMPORTANT** are also used. These are important that you read and follow but are not safety-related.

Visit www.alliedmachine.com for the most up-to-date information and procedures.

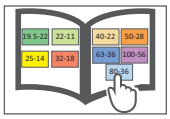

Applicable Industries

Aerospace | Agriculture | Automotive | Firearms | General Machining | Oil & Gas | Renewable Energy

Accessories / Technical Information

Wohlhaupter® Accessories / Technical Information

Your safety and the safety of others is very important. This catalogue contains important safety messages. Always read and follow all safety precautions.

This triangle is a safety hazard symbol. It alerts you to potential safety hazards that can cause tool failure and serious injury.

When you see this symbol in the catalogue, look for a related safety message that may be near this triangle or referred to in the nearby text.

There are safety signal words also used in the catalogue. Safety messages follow these words.

⚠ WARNING

WARNING (shown above) means that failure to follow the precautions in this message could result in tool failure and serious injury.

NOTICE means that failure to follow the precautions in this message could result in damage to the tool or machine but not result in personal injury.

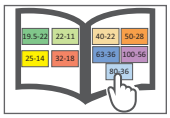

NOTE and **IMPORTANT** are also used. These are important that you read and follow but are not safety-related.

Visit www.alliedmachine.com for the most up-to-date information and procedures.

Guidelines for not Exceeding Recommended Length-to-diameter Ratio

To calculate, see graphics below:

NOTE: Length-to-diameter ratio is calculated using body diameters not cutting diameter.
NOTE: Do not exceed recommended 10xD length-to-diameter ratio or exceed four total components (including shank)

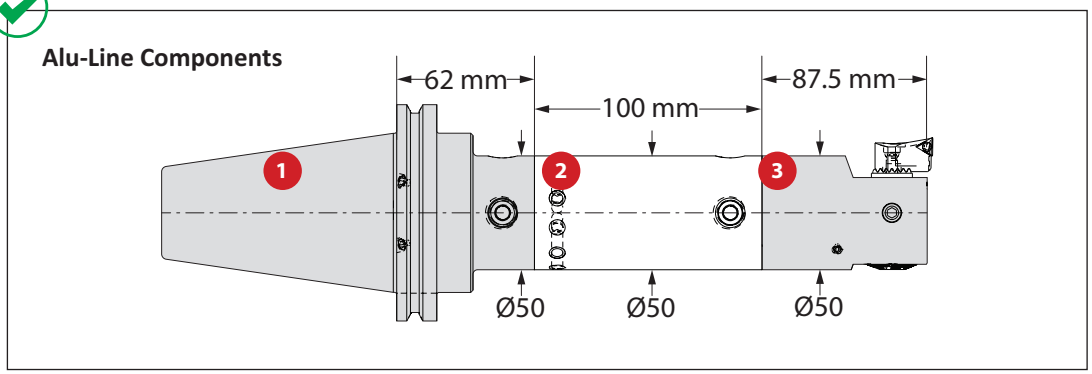

Step 1: Find L : D by component

1. 1.2 = 62/50
2. 2.0 = 100/50
3. 2.0 = 100/50
4. 2.0 = 100/50
5. 2.0 = 100/50
6. 1.8 = 72.5/40

Step 2: Add each L : D Average

1.2
2.0
2.0
2.0
2.0
+ 1.8
11.0 = L : D ratio

Too long with too many components!

NOTE: Length-to-diameter ratio is calculated using body diameters not cutting diameter.
NOTE: Do not exceed recommended 5xD length-to-diameter ratio when using Alu-Line (Aluminium) components or exceed four total components (including shank).

Step 1: Find L : D by component

1. 1.2 = 62/50
2. 2.0 = 100/50
3. 1.8 = 87.5/50

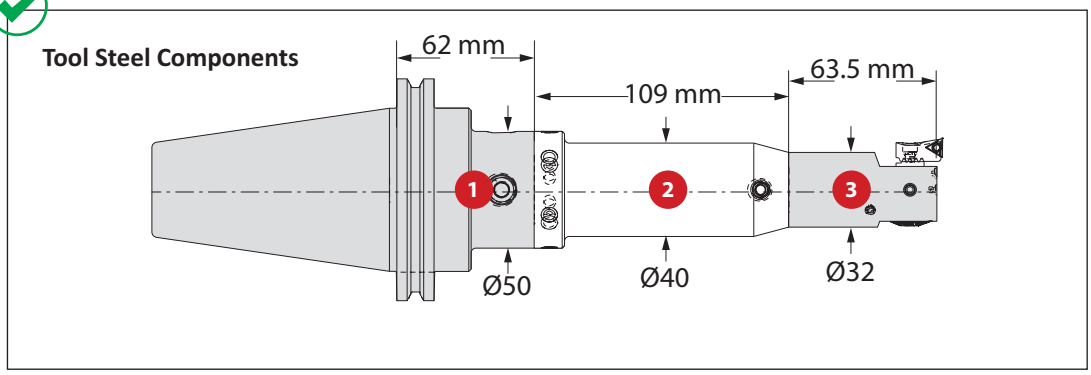

Step 2: Add each L : D average

1.2
2.0
+ 1.8
5.0 = L : D ratio

WARNING **Tool failure can cause serious injury. To prevent:**
-Do not exceed recommended 10xD length-to-diameter ratio or exceed four total components (including shank)
-When using Alu-Line components, do not exceed recommended 5xD length-to-diameter ratio
-When using tool steel components, do not exceed recommended 6xD length-to-diameter ratio
-When using heavy metal components, do not exceed recommended 8xD length-to-diameter ratio
-When using a carbide shank, do not exceed recommended 9xD length-to-diameter ratio
-When using a NOVI[TECH®] module, do not exceed recommended 10xD length-to-diameter ratio
Factory technical assistance is available for your specific applications through our Application Engineering department. *email:* **engineering.eu@alliedmachine.com**

Guidelines for not Exceeding Recommended Length-to-diameter Ratio

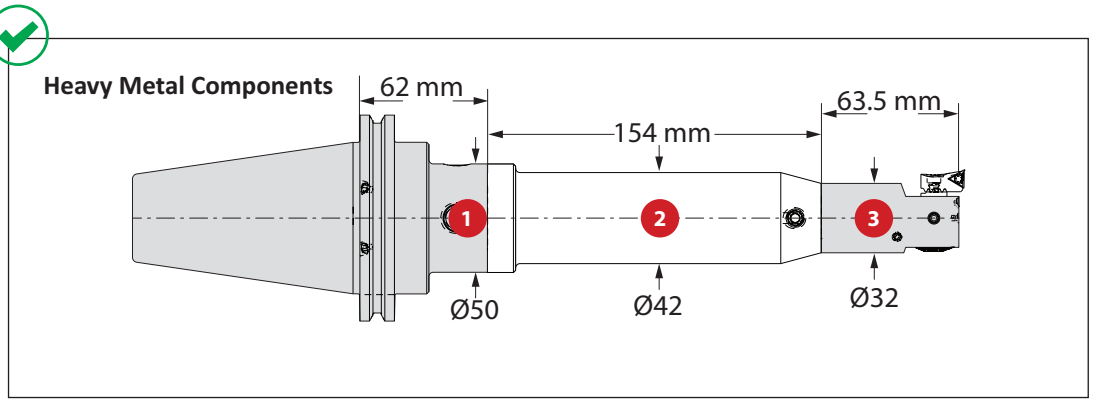

To calculate, see graphics below:

NOTE: Length-to-diameter ratio is calculated using body diameters not cutting diameter.
NOTE: When using steel components, do not exceed recommended 6xD length-to-diameter ratio or exceed four total components (including shank).

Step 1: Find L : D by component
1. 1.2 = 62/50
2. 2.7 = 109/40
3. 2.0= 63.5/32

Step 2: Add each L : D average
1.2
2.7
+ 2.0
5.9 = L : D ratio

NOTE: Length-to-diameter ratio is calculated using body diameters not cutting diameter.
NOTE: When using heavy metal components, do not exceed recommended 8xD length-to-diameter ratio or exceed four total components (including shank).

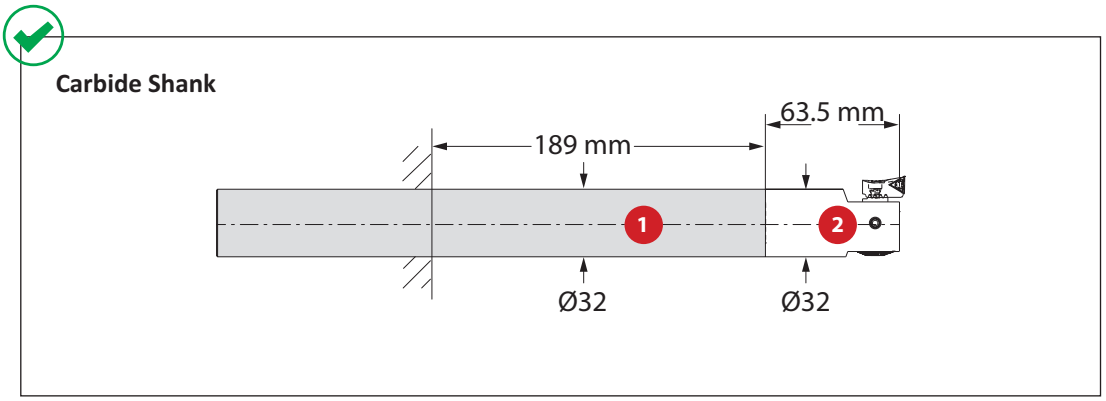

Step 1: Find L : D by component
1. 1.2 = 62/50
2. 3.6 = 154/42
3. 2.0 = 63.5/32

Step 2: Add each L : D average
1.2
3.6
+ 2.0
6.8= L : D ratio

⚠ WARNING **Tool failure can cause serious injury. To prevent:**
-Do not exceed recommended 10xD length-to-diameter ratio or exceed four total components (including shank)
-When using Alu-Line components, do not exceed recommended 5xD length-to-diameter ratio
-When using tool steel components, do not exceed recommended 6xD length-to-diameter ratio
-When using heavy metal components, do not exceed recommended 8xD length-to-diameter ratio
-When using a carbide shank, do not exceed recommended 9xD length-to-diameter ratio
-When using a NOVI[TECH®] module, do not exceed recommended 10xD length-to-diameter ratio
Factory technical assistance is available for your specific applications through our Application Engineering department. *email:* **engineering.eu@alliedmachine.com**

Guidelines for not Exceeding Recommended Length-to-diameter Ratio

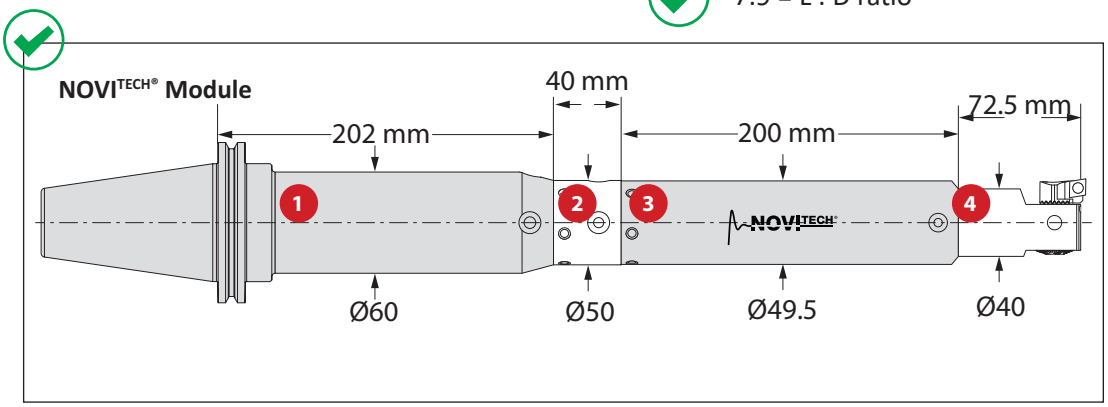

To calculate, see graphics below:

NOTE: Length-to-diameter ratio is calculated using body diameters not cutting diameter.
NOTE: When using carbide shank components, do not exceed recommended 9xD length-to-diameter ratio or exceed 4 total components.

Step 1: Find L : D by component
1. 8.1 = 189/32
2. 2.0 = 63.5/32

Step 2: Add each L : D average
5.9
+ 2.0
7.9 = L : D ratio

NOTE: Length-to-diameter ratio is calculated using body diameters not cutting diameter.
NOTE: Do not exceed recommended 10xD length-to-diameter ratio when using NOVI^{TECH} intermediate modules or exceed four total components (including shank)
NOTE: The NOVI^{TECH} intermediate module should always be assembled as close as possible to the cutting edge (i.e. the next component behind the boring head)

Step 1: Find L : D by component
1. 3.3 = 202/60
2. 0.8 = 40/50
3. 4.0 = 200/49.5
4. 1.8 = 72.5/40

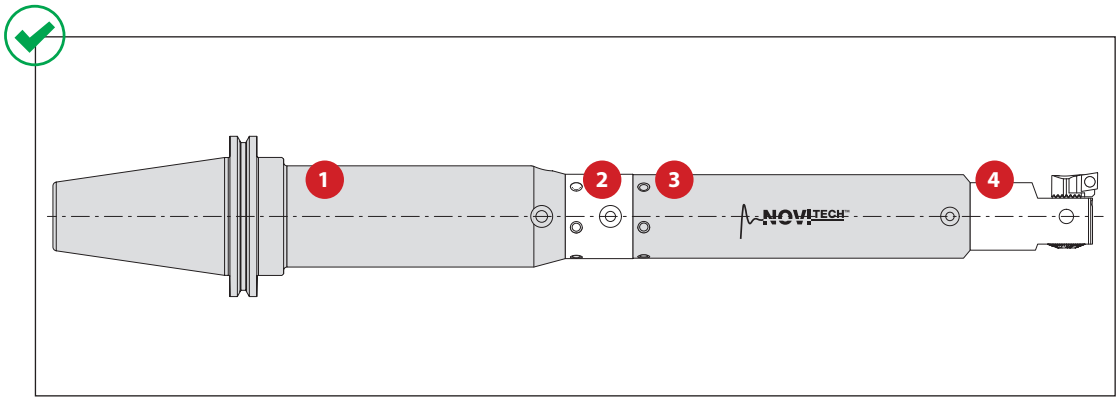

Step 2: Add each L : D average
3.3
0.8
4.0
+ 1.8
9.9 = L : D ratio

Component	Length-to-diameter Ratio
Alu-Line	5xD
Tool Steel	6xD
Heavy Metal	8xD
Carbide	9xD
NOVI$^{TECH®}$	10xD

⚠ WARNING **Tool failure can cause serious injury. To prevent:**
-Do not exceed recommended 10xD length-to-diameter ratio or exceed four total components (including shank)
-When using Alu-Line components, do not exceed recommended 5xD length-to-diameter ratio
-When using tool steel components, do not exceed recommended 6xD length-to-diameter ratio
-When using heavy metal components, do not exceed recommended 8xD length-to-diameter ratio
-When using a carbide shank, do not exceed recommended 9xD length-to-diameter ratio
-When using a NOVI$^{TECH®}$ module, do not exceed recommended 10xD length-to-diameter ratio
Factory technical assistance is available for your specific applications through our Application Engineering department. *email:* **engineering.eu@alliedmachine.com**

Calculating Tool Assembly Weight

To calculate, see graphics below:

Step 1: Find weight for each component circled in the example table below

Example:

MVS Connection	Boring Range	4 Boring Head					
D_1 & D_2	A	X_1	X_2	L_2	D_5	Weight	Part No.
40 - 22	53.01 - 65.98	75.00	39.00	72.50	–	0.70 (kg)	**320004**

Step 2: Calculate total assembly weight

1 6.6 kg
2 0.6 kg
3 3.5 kg
\+ 4 0.7 kg
11.4 kg

Step 3: Consult machine tool builder to ensure tool assembly weight does not exceed machine capabilities.

WARNING **Exceeding weight capacity for machine tool spindle and tool changer can cause machine damage and/or serious injury. To prevent:**
-Consult machine tool builder for machine's weight limitations.
Factory technical assistance is also available for specific applications through our Application Engineering department. *email:* **engineering.eu@alliedmachine.com**

*Not to exceed max recommended RPM for boring head found in corresponding Wohlhaupter Operation Manual

Deep Hole Boring Speed Adjustment

⚠ For Dynamic Boring Tool Length				
Boring Type	**7xD**	**8xD**	**9xD**	**10xD**
Roughing	❖	❖	❖	❖
Finishing	0.70	0.50	0.30	❖

❖ Contact our Application Engineering department for assistance when boring these depths without NOVI^{TECH}.

Deep Hole Boring Speed Adjustment

⚠ For Dynamic Boring Tool NOVI^{TECH} Length			
Boring Type	**8xD**	**9xD**	**10xD**
Roughing	0.80	0.60	0.40
Finishing	0.90	0.70	0.50

*Not to exceed recommended RPM printed on NOVI^{TECH} module

Recommended Speed Example

If the recommended speed for a finish boring assembly under 5xD is 120 M/Min, then the speed for a 10xD finish boring assembly in the same application would be 60 M/Min (120 M/Min x 0.50 = 60 M/Min)

5xD = 120 M/Min	10xD = 60 M/Min

IMPORTANT: Max spindle speed refers to maximum possible speed for individual boring head and is not a recommended parameter. Factory technical assistance is available for your specific applications through our Application Engineering department. *email:* **engineering.eu@alliedmachine.com**

⚠ **WARNING** **Tool failure can cause serious injury. To prevent:**
-Do not exceed recommended 10xD length-to-diameter ratio or exceed four total components (including shank)
-When using Alu-Line components, do not exceed recommended 5xD length-to-diameter ratio
-When using tool steel components, do not exceed recommended 6xD length-to-diameter ratio
-When using heavy metal components, do not exceed recommended 8xD length-to-diameter ratio
-When using a carbide shank, do not exceed recommended 9xD length-to-diameter ratio
-When using a NOVI$^{TECH®}$ module, do not exceed recommended 10xD length-to-diameter ratio
Factory technical assistance is available for your specific applications through our Application Engineering department. *email:* **engineering.eu@alliedmachine.com**

-When using Alu-Line components, do not exceed recommended 5xD length-to-diameter ratio
-When using tool steel components, do not exceed recommended 6xD length-to-diameter ratio
-When using heavy metal components, do not exceed recommended 8xD length-to-diameter ratio
-When using a carbide shank, do not exceed recommended 9xD length-to-diameter ratio
-When using a NOVI$^{TECH®}$ module, do not exceed recommended 10xD length-to-diameter ratio
Factory technical assistance is available for your specific applications through our Application Engineering department. *email:* **engineering.eu@alliedmachine.com**

Allied Machine & Engineering

Guaranteed Test / Demo Application Form

Distributor PO #	

The following must be filled out completely before your test will be considered

IMPORTANT: For processing, send Purchase Order to your Allied Field Sales Engineer (FSE). Please clearly mark the paperwork as "Test Order."

Distributor Information

Company Name: _____

Contact: _____

Account Number: _____

Phone: _____

Email: _____

End User Information

Company Name: _____

Contact: _____

Industry: _____

Phone: _____

Email: _____

Current Process

List all tooling, coatings, substrates, speeds and feeds, tool life, and any problems you are experiencing

_____

_____

Test Objective

List what would make this a successful test (i.e. penetration rate, finish, tool life, hole size, etc.)

_____

_____

Application Information

Hole Diameter: _____ in/mm

Tolerance: _____

Material: _____ (4150 / A36 / Cast Iron / etc.)

Pre-existing Diameter: _____ in/mm

Depth of Cut: _____ in/mm

Hardness: _____ (BHN / Rc)

Required Finish: _____ RMS

State: _____ (Casting / Hot rolled / Forging)

Machine Information

Machine Type: _____ (Lathe / Screw machine / Machine center / etc.)

Builder: _____ (Haas, Mori Seiki, etc.)

Model #: _____

Shank Required: _____ (CAT50 / Morse taper, etc.)

Power: _____ HP/KW

Thrust: _____ lbs/N

Rigidity:
- ☐ Excellent
- ☐ Good
- ☐ Poor

Orientation:
- ☐ Vertical
- ☐ Horizontal

Tool Rotating:
- ☐ Yes
- ☐ No

Coolant Information

Coolant Delivery: _____ (Through tool / Flood)

Coolant Pressure: _____ PSI / bar

Coolant Type: _____ (Air mist, oil, synthetic, water soluble, etc.)

Coolant Volume: _____ GPM / LPM

Requested Tooling

ALLIED MACHINE & ENGINEERING

Warranty Information

Allied Machine & Engineering ("Allied Machine") warrants to original equipment manufacturers, distributors, industrial and commercial users of its products for one year from the original date of sale that each new product manufactured or supplied by Allied Machine shall be free from defects in material and workmanship.

Allied Machine's sole and exclusive obligation under this warranty is limited to, at its option, without additional charge, replacing or repairing this product or issuing a credit. For this warranty to be applied, the product must be returned freight prepaid to the plant designated by an Allied Machine representative and which, upon inspection, is determined by Allied Machine to be defective in material and workmanship.

Complete information as to operating conditions, machine, setup, and the application of cutting fluid should accompany any product returned for inspection. This warranty shall not apply to any Allied Machine products which have been subjected to misuse, abuse, improper operating conditions, improper machine setup or improper application of cutting fluid or which have been repaired or altered if such repair or alteration, in the judgement of Allied Machine, would adversely affect the performance of the product.

THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Allied Machine shall have no liability or responsibility for any claim, whether in contract, tort or otherwise, for any loss or damage arising out of, connected with, or resulting from the manufacture, sale, delivery or use of any product sold hereunder, in excess of the cost of replacement or repair as provided herein.

Allied Machine shall not be liable in contract or in tort (including, without limitation, negligence, strict liability or otherwise) for economic losses of any kind or for any special, incidental, indirect, consequential, punitive or exemplary damages arising in any way out of the performance of, or failure to perform this agreement.

ALL PRICES, DELIVERIES, DESIGNS, AND MATERIALS ARE SUBJECT TO CHANGE WITHOUT NOTICE.

Interactive Experience

Visit our digital platform.

- Explore various locations and zones to see real people in real positions
- See our training and engineering departments
- Get a glimpse of our state-of-the-art logistical and machining equiptment
- Virtually meet our customer service and marketing teams
- Access digital resources like literature, videos, and online tools and training

experience.alliedmachine.com

ToolMD®

Increase the production and success of your applications today.

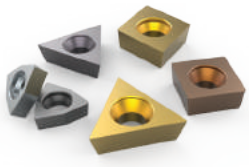

- Direct access to 2D drawings and 3D models
- Assemble and view tool images in your browser
- Download drawings for use in most machining software programs
- Browse products, search item numbers, and save assemblies for future use

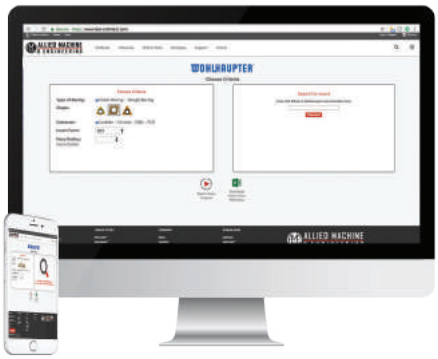

toolmd.com

WOHLHAUPTER® Boring Insert Selector

Find the best insert for your application.

- Generate the correct boring insert for your job in just six easy steps
- Choose type, shape, substrate, insert form, nose radius, and material
- Order easily by adding the item to your cart

alliedmachine.com/bis

Insta-Code®

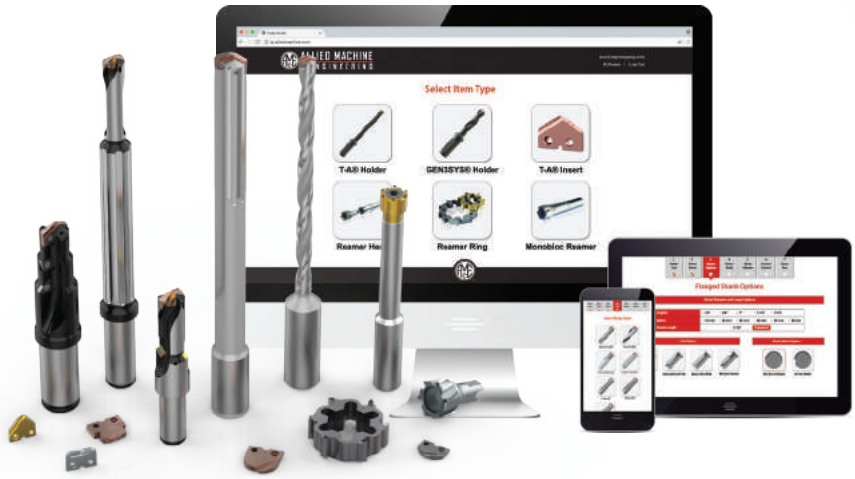

Eliminate the wait. Get your program now.

- Choose the best thread mill for your application
- Create program code for your machine
- Available as a PC download app (that can be used offline)
- Website app available 24/7

Insta-Code also has a **Cycle Time Calculator**

alliedmachine.com/InstaCode

Insta-Quote®

Design your custom tooling and receive a drawing and quote...all within minutes.

- Design and quote your own tooling
- Generate the solution you need in just a few steps
- Features the following products:
  - **T-A® Inserts**
  - **T-A® Holders**
  - **GEN3SYS® XT Holders**
  - **ALVAN® Reamers**

iq.alliedmachine.com

Solution Hub App

All Allied all the time.

- Quickly look up product information
- Links to our free online tools
- Locate distributors
- Stay up to date on news and events

Machinist Tool App

Quickly convert cutting tool parameters for the machine inputs you need.

- Input data to calculate the RPM and speed and feed rates
- Also features the Boring Insert Selector
- Access product literature right at your fingertips

Customer Support

Support You Can Count On

Allied Machine has many lines of support to ensure we're available to assist you at all times. It's important to establish relationships with new customers, but we also know it's equally important to strengthen and support relationships with existing customers. Whether you need help with an order or you need someone to come assist you at the spindle, we have the right people to get you what you need.

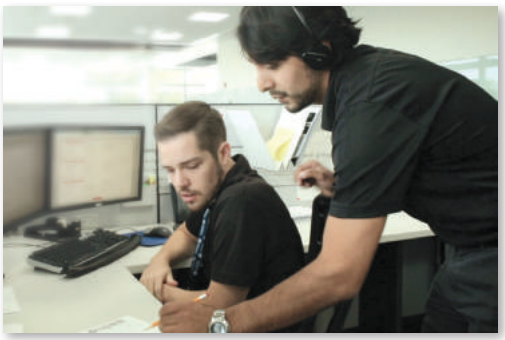

1

Internal Sales Support

Our inside sales team is trained to handle your account information and general inquiries. We are happy to assist you and find the answers to your questions.

+44 (0)1384 400900 opt. 3

sales.eu@alliedmachine.com

2

Engineering Support

Our highly trained and skilled Application Engineers are here to assist you. If you are experiencing technical difficulties, our engineers will recommend the best solutions to the problem. Speeds and feeds, coolant pressure, and other machining components all affect the performance of our tooling. Our Application Engineers (AEs) are experienced in working with difficult materials in many different environments. Give us a call and put our knowledge to the test.

+44 (0)1384 400900 opt. 4

engineering.eu@alliedmachine.com

3

Field Support

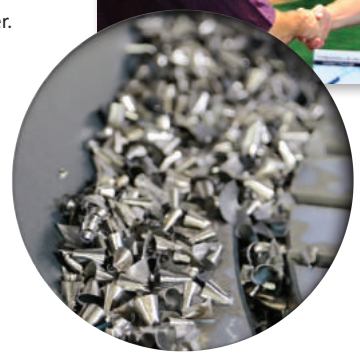

Allied Machine provides local engineering support all over the world. Our Field Sales Engineers (FSEs) spend months training in-house before going to the field. This support line allows us to provide assistance to our customers right at the spindle. They are available to visit your facility, run demos and tests, and work hand-in-hand with machine operators and engineers to find the best possible tooling solutions.

Visit **www.alliedmachine.com/field-lookup** to find your Regional Sales Manager.

Allied Tool Academy

Online | On-site Technical Education Seminar (TES) | LIVE (Broadcasting)

Online Training

Get ***all*** the tooling training of our 2-day in-person Technical Education Seminar (TES) through the online **Allied Tool Academy** training platform. Level up your tooling IQ through a series of product overviews, demos, and short quizzes.

- Online TES Certification as well as other training modules
- On demand
- On YOUR schedule

Register online today:
www.alliedtoolacademy.com

Register online today:
www.alliedmachine.com/live

Allied LIVE (Broadcasting)

Join us for ***LIVE*** **broadcast** training events where you will have the ability to learn about our tooling, watch live demos, and ask our trainers questions.

- Online
- Quick brief presentation provides basic knowledge of our products
- Watch live demos of tools at the spindle at different speeds and feeds

On-site Technical Education Seminar (TES)

Allied Machine's **Technical Education Seminar (TES)** puts the attendees in front of the machines. When you attend our two day TES program, you'll gain first-hand experience in ***real-life*** application situations. Test and experiment with different speeds and feeds, observe the results, and discover the best solution.

- Training Lab: In-depth training at the spindle allows you to choose speeds and feeds
- Learning Lab: Quick, brief sessions provide basic knowledge of our products

Holemaking Solutions for Today's Manufacturing

ALLIED MACHINE & ENGINEERING

Warranty Information

Allied Machine & Engineering ("Allied Machine") warrants to original equipment manufacturers, distributors, industrial and commercial users of its products for one year from the original date of sale that each new product manufactured or supplied by Allied Machine shall be free from defects in material and workmanship.

Allied Machine's sole and exclusive obligation under this warranty is limited to, at its option, without additional charge, replacing or repairing this product or issuing a credit. For this warranty to be applied, the product must be returned freight prepaid to the plant designated by an Allied Machine representative and which, upon inspection, is determined by Allied Machine to be defective in material and workmanship.

Complete information as to operating conditions, machine, setup, and the application of cutting fluid should accompany any product returned for inspection. This warranty shall not apply to any Allied Machine products which have been subjected to misuse, abuse, improper operating conditions, improper machine setup or improper application of cutting fluid or which have been repaired or altered if such repair or alteration, in the judgement of Allied Machine, would adversely affect the performance of the product.

THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Allied Machine shall have no liability or responsibility for any claim, whether in contract, tort or otherwise, for any loss or damage arising out of, connected with, or resulting from the manufacture, sale, delivery or use of any product sold hereunder, in excess of the cost of replacement or repair as provided herein.

Allied Machine shall not be liable in contract or in tort (including, without limitation, negligence, strict liability or otherwise) for economic losses of any kind or for any special, incidental, indirect, consequential, punitive or exemplary damages arising in any way out of the performance of, or failure to perform this agreement.

ALL PRICES, DELIVERIES, DESIGNS, AND MATERIALS ARE SUBJECT TO CHANGE WITHOUT NOTICE.
