## Powerful Drives for Mining Processing

Kumera Drives is a prominent designer, manufacturer and service provider of mechanical power transmissions. The experience gathered over decades guarantees high expertise and innovative quality products and services for today's mining industry. Depending on customers' needs, we can offer products from our standard gear range as well as tailor-made solutions just for the special need.

When the equipment manufacturer is choosing a supplier for power transmission equipment, a low life-cycle cost, price, quality and functionality are taken into consideration. Easy maintenance and flexible spare part and overhaul services are also one of the most important criteria in selecting a supplier.

The Kumera Drives products and services fulfill the demanding requirements set by its customers. The highly satisfactory combination and balance between different aspects has been achieved by working in close and long-term cooperation with original equipment manufacturers and end-users in the mining industry.

*Conveyor drives in aboveground mines are typical mining applications of Kumera Drives.*

*Kumera Drives offers complete functional packages for rotary drum drives including gear units, pinion wheel, girth gears, and assembly base.*

*Crusher drives*

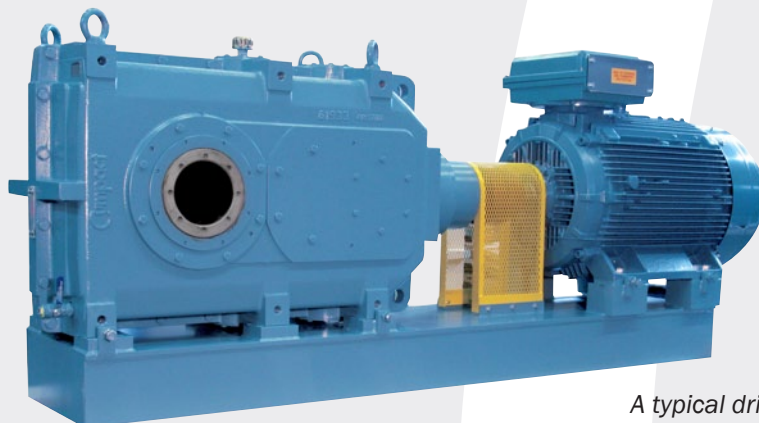

*Bucket excavator drives*

*Agitator gear unit in mineral separating process*

## Extensive expertise in mining applications

Kumera Drives designs and manufactures a full range of gear units for critical mining applications, such as conveying, mixing, agitating, and drying. We have extensive expertise in conveyor drives in both underground and aboveground mines. The special requirements of the mining environment have been taken into account in sealings, bearings, and breather valves. Our products also have the necessary environmental classifications, such as ATEX for gear units in coal mines.

*A typical drive package for conveyors.*
